Changes to the specifications and features in this manual may be made by GIGABYTE without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without GIGABYTE's prior written permission.

Documentation Classifications
In order to assist in the use of this product, GIGABYTE provides the following types of documentations:

- For quick set-up of the product, read the Quick Installation Guide included with the product.
- For detailed product information, carefully read the User's Manual.
- For instructions on how to use GIGABYTE's unique features, read or download the information on/from the Support\Motherboard\Technology Guide page on our website.

For product-related information, check on our website at:
http://www.gigabyte.com.tw

Identifying Your Motherboard Revision
The revision number on your motherboard looks like this: "REV: X.X." For example, "REV: 1.0" means the revision of the motherboard is 1.0. Check your motherboard revision before updating motherboard BIOS, drivers, or when looking for technical information.

Example:

**Box Contents**

- GA-X48-DQ6 motherboard
- Motherboard driver disk
- User's Manual
- Quick Installation Guide
- Intel® LGA775 CPU Installation Guide
- One IDE cable and one floppy disk drive cable
- Four SATA 3Gb/s cables
- Two SATA brackets
- I/O Shield
- Three screws

- The box contents above are for reference only and the actual items shall depend on product package you obtain.
- The box contents are subject to change without notice.
- The motherboard image is for reference only.

**Optional Items**

- 2-port USB 2.0 bracket (Part No. 12CR1-1UB030-51R)
- 2-port IEEE 1394a bracket (Part No. 12CF1-1IE008-01R)
- 2-port SATA power cable (Part No. 12CF1-2SERPW-01R)
- S/PDIF in cable (Part No. 12CR1-1SPDIN-01R)
- COM port cable (Part No. 12CF1-1CM001-32R)
- LPT port cable (Part No. 12CF1-1LP001-01R)

1-1 Installation Precautions

The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the user’s manual and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.
## 1-2 Product Specifications

**CPU**
- Support for an Intel® Core™ 2 Extreme processor/
  Intel® Core™ 2 Quad processor/Intel® Core™ 2 Duo processor/
  Intel® Pentium® processor Extreme Edition/Intel® Pentium® D processor/
  Intel® Pentium® 4 processor Extreme Edition/Intel® Pentium® 4 processor/
  Intel® Celeron® processor in the LGA 775 package
  (Go to GIGABYTE’s website for the latest CPU support list.)
- L2 cache varies with CPU

**Front Side Bus**
- 1600/1333/1066/800 MHz FSB

**Chipset**
- North Bridge: Intel® X48 Express Chipset
- South Bridge: Intel® ICH9R

**Memory**
- 4 x 1.8V DDR2 DIMM sockets supporting up to 8 GB of system memory *(Note 1)*
- Dual channel memory architecture
- Support for DDR2 1200/1066/800/667 MHz memory modules
  (Go to GIGABYTE’s website for the latest memory support list.)

**Audio**
- Realtek ALC889A codec
- High Definition Audio
- 2/4/5.1/7.1-channel
- Support for DTS (dts NEO:PC)
- Support for S/PDIF In/Out
- Support for CD In

**LAN**
- 2 x Realtek 8111C chips (10/100/1000 Mbit)
- Support for Teaming

**Expansion Slots**
- 2 x PCI Express x16 slots supporting ATI CrossFireX™ technology
  (The PCI Express x16 slots conform to PCI Express 2.0 standard.)
- 3 x PCI Express x1 slots
- 2 x PCI slots

**Storage Interface**
- South Bridge:
  - 6 x SATA 3Gb/s connectors (SATAII0, SATAII1, SATAII2, SATAII3,
    SATAII4, SATAII5) supporting up to 6 SATA 3Gb/s devices
  - Support for SATA RAID 0, RAID 1, RAID 5 and RAID 10
- GIGABYTE SATA2 chip:
  - 1 x IDE connector supporting ATA-133/100/66/33 and up to 2 IDE devices
  - 2 x SATA 3Gb/s connectors (GSATAIIA, GSATAIIB) supporting up to
    2 SATA 3Gb/s devices
  - Support for SATA RAID 0, RAID 1 and JBOD
- iTE IT8718 chip:
  - 1 x floppy disk drive connector supporting up to 1 floppy disk drive

**IEEE 1394**
- T.I. TSB43AB23 chip
- Up to 3 IEEE 1394a ports (2 on the back panel, 1 via the IEEE 1394a bracket
  connected to the internal IEEE 1394a header)
| **USB** | • Integrated in the South Bridge  
|         | • Up to 12 USB 2.0/1.1 ports (8 on the back panel, 4 via the USB brackets connected to the internal USB headers) |
| **Internal Connectors** | • 1 x 24-pin ATX main power connector  
|                  | • 1 x 8-pin ATX 12V power connector  
|                  | • 1 x floppy disk drive connector  
|                  | • 1 x IDE connector  
|                  | • 8 x SATA 3Gb/s connectors  
|                  | • 1 x CPU fan header  
|                  | • 2 x system fan headers  
|                  | • 1 x power fan header  
|                  | • 1 x North Bridge fan header  
|                  | • 1 x front panel header  
|                  | • 1 x front panel audio header  
|                  | • 1 x CD In connector  
|                  | • 1 x S/PDIF In header  
|                  | • 1 x S/PDIF Out header  
|                  | • 2 x USB 2.0/1.1 headers  
|                  | • 1 x IEEE 1394a header  
|                  | • 1 x parallel port header  
|                  | • 1 x Trusted Platform Module (TPM) header  
|                  | • 1 x serial port header  
|                  | • 1 x power LED header  
|                  | • 1 x chassis intrusion header  
| **Back Panel Connectors** | • 1 x PS/2 keyboard port  
|                       | • 1 x PS/2 mouse port  
|                       | • 1 x coaxial S/PDIF Out connector  
|                       | • 1 x optical S/PDIF Out connector  
|                       | • 8 x USB 2.0/1.1 ports  
|                       | • 2 x IEEE 1394a ports  
|                       | • 2 x RJ-45 ports  
|                       | • 6 x audio jacks (Center/Subwoofer Speaker Out/Rear Speaker Out/Side Speaker Out/Line In/Line Out/Microphone)  
| **I/O Controller** | • iTE IT8718 chip  
| **Hardware Monitor** | • System voltage detection  
|                     | • CPU/System temperature detection  
|                     | • CPU/System/Power fan speed detection  
|                     | • CPU overheating warning  
|                     | • CPU/System/Power fan fail warning  
|                     | • CPU fan speed control (Note 2)  

- 11 -  
Hardware Installation
BIOS
- 2 x 8 Mbit flash
- Use of licensed AWARD BIOS
- Support for Dual BIOS™
- PnP 1.0a, DMI 2.0, SM BIOS 2.4, ACPI 1.0b

Unique Features
- Support for @BIOS
- Support for Download Center
- Support for Q-Flash
- Support for EasyTune (Note 3)
- Support for Xpress Install
- Support for Xpress Recovery2
- Support for Virtual Dual BIOS
- Support for Dynamic Energy Saver

Bundled Software
- Norton Internet Security (OEM version)

Overclocking
- Voltage adjustments in BIOS Setup (CPU/DDR2/PCIe/FSB/(G)MCH) allow you to:
  - Increase CPU voltage (Note 4)
  - Increase DDR2 voltage by 0.05V to 1.55V with 0.05V increment
  - Increase PCIe voltage by 0.05V to 0.75V with 0.05V increment
  - Increase FSB voltage by 0.05V to 0.35V with 0.05V increment
  - Increase (G)MCH voltage by 0.025V to 0.375V with 0.025V increment
- Frequency adjustments in BIOS Setup (CPU/DDR2/PCIe) allow you to:
  - Adjust CPU host frequency from 100 MHz to 700 MHz with 1 MHz increment
  - Adjust DDR2 frequency
  - Adjust PCI Express frequency from 90 MHz to 150 MHz with 1 MHz increment

Operating System
- Support for Microsoft® Windows® Vista/XP/2000 (Note 5)

Form Factor
- ATX Form Factor; 30.5cm x 24.4cm

(Note 1) Due to Windows XP 32-bit operating system limitation, when more than 4 GB of physical memory is installed, the actual memory size displayed will be less than 4 GB.
(Note 2) Whether the CPU fan speed control function is supported will depend on the CPU cooler you install.
(Note 3) Available functions in Easytune may differ by motherboard model.
(Note 4) The adjustable CPU voltage range depends on the CPU being used.
(Note 5) Due to chipset limitation, Intel ICH9R RAID driver does not support Windows 2000 operating system.
1-3 Installing the CPU and CPU Cooler

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.
  (Go to GIGABYTE’s website for the latest CPU support list.)
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Locate the pin one of the CPU. The CPU cannot be inserted if oriented incorrectly. (Or you may locate the notches on both sides of the CPU and alignment keys on the CPU socket.)
- Apply an even and thin layer of thermal grease on the surface of the CPU.
- Do not turn on the computer if the CPU cooler is not installed, otherwise overheating and damage of the CPU may occur.
- Set the CPU host frequency in accordance with the CPU specifications. It is not recommended that the system bus frequency be set beyond hardware specifications since it does not meet the standard requirements for the peripherals. If you wish to set the frequency beyond the standard specifications, please do so according to your hardware specifications including the CPU, graphics card, memory, hard drive, etc.

1-3-1 Installing the CPU

A. Locate the alignment keys on the motherboard CPU socket and the notches on the CPU.

![Diagram showing CPU alignment keys and notches]
B. Follow the steps below to correctly install the CPU into the motherboard CPU socket.

**CAUTION**

Before installing the CPU, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the CPU.

1. Completely raise the CPU socket lever.

2. Remove the protective socket cover.

3. Lift the metal load plate on the CPU socket.

4. Hold the CPU with your thumb and index fingers. Align the CPU pin one marking (triangle) with the pin one corner of the CPU socket (or you may align the CPU notches with the socket alignment keys) and gently insert the CPU into position.

5. Once the CPU is properly inserted, replace the load plate and push the CPU socket lever back into its locked position.
1-3-2 Installing the CPU Cooler

Follow the steps below to correctly install the CPU cooler on the motherboard. (The following procedure uses Intel® boxed cooler as the example cooler.)

**Step 1:**
Apply an even and thin layer of thermal grease on the surface of the installed CPU.

**Step 2:**
Before installing the cooler, note the direction of the arrow sign on the male push pin. (Turning the push pin along the direction of arrow is to remove the cooler, on the contrary, is to install.)

**Step 3:**
Place the cooler atop the CPU, aligning the four push pins through the pin holes on the motherboard. Push down on the push pins diagonally.

**Step 4:**
You should hear a "click" when pushing down each push pin. Check that the Male and Female push pins are joined closely. (Refer to your CPU cooler installation manual for instructions on installing the cooler.)

**Step 5:**
After the installation, check the back of the motherboard. If the push pin is inserted as the picture above, the installation is complete.

**Step 6:**
Finally, attach the power connector of the CPU cooler to the CPU fan header (CPU_FAN) on the motherboard.

Use extreme care when removing the CPU cooler because the thermal grease/tape between the CPU cooler and CPU may adhere to the CPU. Inadequately removing the CPU cooler may damage the CPU.
1-3-3 Installing the Crazy Cool Heatsink on the Back of the Motherboard

Please follow the steps below to install the Crazy Cool heatsink provided with the motherboard.

- Use extreme care when installing or removing the Crazy Cool heatsink. The user shall be responsible for damage of motherboard function(s) or component(s) resulting from the removal of the Crazy Cool heatsink.
- Always keep the removed screws in a safe place.

Please prepare:
1. A Philips screwdriver
2. The Crazy Cool heatsink and three screws provided with the motherboard

![The Crazy Cool Heatsink/Screws]

**Step 1:** Unfasten the two bolts holding the North Bridge heatsink (as shown in the picture to the left) and remove the bolts. Remove the back plate from the back of the motherboard.

![Step 1]

**Step 2:** Affix the Crazy Cool heatsink to the back of the motherboard.

![Step 2]

**Step 3:** On the front side of the motherboard, align the two bolts removed in Step 1 with the nuts on the Crazy Cool heatsink and then fasten the bolts tightly.

![Step 3]

**Step 4:** As shown, align the three provided screws with the mounting holes on the motherboard and the Crazy Cool heatsink and then tighten the screws to complete the Crazy Cool installation.

![Step 4]

(Note) The components received may vary in appearance from the ones illustrated above.
1-4 Installing the Memory

Read the following guidelines before you begin to install the memory:

• Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
  (Go to GIGABYTE’s website for the latest memory support list.)
• Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
• Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

1-4-1 Dual Channel Memory Configuration

This motherboard provides four DDR2 memory sockets and supports Dual Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory. Enabling Dual Channel memory mode will double the original memory bandwidth.

The four DDR2 memory sockets are divided into two channels and each channel has two memory sockets as following:
- Channel 0: DDRII1, DDRII2
- Channel 1: DDRII3, DDRII4

Due to chipset limitation, read the following guidelines before installing the memory in Dual Channel mode.

1. Dual Channel mode cannot be enabled if only one DDR2 memory module is installed.
2. When enabling Dual Channel mode with two or four memory modules, it is recommended that memory of the same capacity, brand, speed, and chips be used and installed in the same colored DDR2 sockets for optimum performance.

When memory modules of different capacity and chips are installed, a message which says memory is operating in Flex Memory Mode will appear during the POST. Intel® Flex Memory Technology offers greater flexibility to upgrade by allowing different memory sizes to be populated and remain in Dual Channel mode/performance.
1-4-2 Installing a Memory

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module. DDR2 DIMMs are not compatible to DDR DIMMs. Be sure to install DDR2 DIMMs on this motherboard.

A DDR2 memory module has a notch, so it can only fit in one direction. Follow the steps below to correctly install your memory modules in the memory sockets.

Step 1:
Note the orientation of the memory module. Spread the retaining clips at both ends of the memory socket. Place the memory module on the socket. As indicated in the picture on the left, place your fingers on the top edge of the memory, push down on the memory and insert it vertically into the memory socket.

Step 2:
The clips at both ends of the socket will snap into place when the memory module is securely inserted.
1-5 Installing an Expansion Card

Read the following guidelines before you begin to install an expansion card:

- Make sure the motherboard supports the expansion card. Carefully read the manual that came with your expansion card.
- Always turn off the computer and unplug the power cord from the power outlet before installing an expansion card to prevent hardware damage.

Follow the steps below to correctly install your expansion card in the expansion slot.
1. Locate an expansion slot that supports your card. Remove the metal slot cover from the chassis back panel.
2. Align the card with the slot, and press down on the card until it is fully seated in the slot.
3. Make sure the metal contacts on the card are completely inserted into the slot.
4. Secure the card's metal bracket to the chassis back panel with a screw.
5. After installing all expansion cards, replace the chassis cover(s).
6. Turn on your computer. If necessary, go to BIOS Setup to make any required BIOS changes for your expansion card(s).
7. Install the driver provided with the expansion card in your operating system.

Example: Installing and Removing a PCI Express x16 Graphics Card:

- Installing a Graphics Card:
  Gently push down on the top edge of the card until it is fully inserted into the PCI Express x16 slot. Make sure the card is securely seated in the slot and does not rock.

- Removing the Card:
  Gently push back on the lever on the slot and then lift the card straight out from the slot.
1-6 Installing the SATA Bracket

The SATA bracket allows you to connect external SATA device(s) to your system by expanding the internal SATA port(s) to the chassis back panel.

- Turn off your system and the power switch on the power supply before installing or removing the SATA bracket and SATA power cable to prevent damage to hardware.
- Insert the SATA signal cable and SATA power cable securely into the corresponding connectors when installing.

The SATA bracket includes one SATA bracket, one SATA signal cable, and one SATA power cable.

Follow the steps below to install the SATA bracket:

Step 1: Locate one free PCI slot and secure the SATA bracket to the chassis back panel with a screw.

Step 2: Connect the SATA cable from the bracket to the SATA port on your motherboard.

Step 3: Connect the power cable from the bracket to the power supply.

Step 4: Plug one end of the SATA signal cable into the external SATA connector on the bracket. Then attach the SATA power cable to the power connector on the bracket.

Step 5: Connect the other ends of the SATA signal cable and SATA power cable to your SATA device. For SATA device in external enclosure, you only need to connect the SATA signal cable. Before connecting the SATA signal cable, make sure to turn off the power of the external enclosure.
1-7 Back Panel Connectors

- **PS/2 Keyboard and PS/2 Mouse Port**
  Use the upper port (green) to connect a PS/2 mouse and the lower port (purple) to connect a PS/2 keyboard.

- **Coaxial S/PDIF Out Connector**
  This connector provides digital audio out to an external audio system that supports digital coaxial audio. Before using this feature, ensure that your audio system provides a coaxial digital audio in connector.

- **Optical S/PDIF Out Connector**
  This connector provides digital audio out to an external audio system that supports digital optical audio. Before using this feature, ensure that your audio system provides an optical digital audio in connector.

- **IEEE 1394a Port**
  The IEEE 1394 port supports the IEEE 1394a specification, featuring high speed, high bandwidth and hotplug capabilities. Use this port for an IEEE 1394a device.

- **USB Port**
  The USB port supports the USB 2.0/1.1 specification. Use this port for USB devices such as an USB keyboard/mouse, USB printer, USB flash drive and etc.

- **RJ-45 LAN Port**
  The Gigabit Ethernet LAN port provides Internet connection at up to 1 Gbps data rate. The following describes the states of the LAN port LEDs.

<table>
<thead>
<tr>
<th>Connection/Speed LED</th>
<th>Activity LED</th>

</table>

- When removing the cable connected to a back panel connector, first remove the cable from your device and then remove it from the motherboard.
- When removing the cable, pull it straight out from the connector. Do not rock it side to side to prevent an electrical short inside the cable connector.

* The positions of the optical S/PDIF out and coaxial S/PDIF out connectors may be interchanged based on the hardware design.
Center/Subwoofer Speaker Out Jack (Orange)
Use this audio jack to connect center/subwoofer speakers in a 5.1/7.1-channel audio configuration.

Rear Speaker Out Jack (Black)
Use this audio jack to connect rear speakers in a 4/5.1/7.1-channel audio configuration.

Side Speaker Out Jack (Gray)
Use this audio jack to connect side speakers in a 7.1-channel audio configuration.

Line In Jack (Blue)
The default line in jack. Use this audio jack for line in devices such as an optical drive, walkman, etc.

Line Out Jack (Green)
The default line out jack. Use this audio jack for a headphone or 2-channel speaker. This jack can be used to connect front speakers in a 4/5.1/7.1-channel audio configuration.

Mic In Jack (Pink)
The default Mic in jack. Microphones must be connected to this jack.

In addition to the default speakers settings, the audio jacks can be reconfigured to perform different functions via the audio software. Only microphones still MUST be connected to the default Mic in jack. Refer to the instructions on setting up a 2/4/5.1/7.1-channel audio configuration in Chapter 5, "Configuring 2/4/5.1/7.1-Channel Audio."
Read the following guidelines before connecting external devices:

- First make sure your devices are compliant with the connectors you wish to connect.
- Before installing the devices, be sure to turn off the devices and your computer. Unplug the power cord from the power outlet to prevent damage to the devices.
- After installing the device and before turning on the computer, make sure the device cable has been securely attached to the connector on the motherboard.
1/2) **ATX_12V_2X/ATX (2x4 12V Power Connector and 2x12 Main Power Connector)**

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, first make sure the power supply is turned off and all devices are properly installed. The power connector possesses a foolproof design. Connect the power supply cable to the power connector in the correct orientation. The 12V power connector mainly supplies power to the CPU. If the 12V power connector is not connected, the computer will not start.

- Use of a power supply providing a 2x4 12V power connector is recommended by the CPU manufacturer when using an Intel Extreme Edition CPU (130W).
- To meet expansion requirements, it is recommended that a power supply that can withstand high power consumption be used (500W or greater). The main power connector is compatible with power supplies with 2x10 power connectors. To prevent system instability or system's failure to boot, be sure to connect a power supply providing a 2x12 power connector.
- The ATX_12V_2X power connector is compatible with power supplies with 2x2 12V power connector. When using a power supply providing a 2x4 12V and power connector, remove the protective covers from the 12V power connector and the main power connector on the motherboard. Do not insert the power supply cables into pins under the protective covers when using a power supply providing a 2x2 12V power connector.

### ATX_12V_2X:

</table>
3/4/5) CPU_FAN/SYS_FAN1/SYS_FAN2/PWR_FAN (Fan Headers)

The motherboard has a 4-pin CPU fan header (CPU_FAN), a 3-pin (SYS_FAN1) and a 4-pin (SYS_FAN2) system fan headers, and a 3-pin power fan header (PWR_FAN). Each fan header supplies a +12V power voltage and possesses a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation. Most fans are designed with color-coded power connector wires. A red power connector wire indicates a positive connection and requires a +12V voltage. The black connector wire is the ground wire. The motherboard supports CPU fan speed control, which requires the use of a CPU fan with fan speed control design. For optimum heat dissipation, it is recommended that a system fan be installed inside the chassis.

<table>
<thead>
<tr>
<th>Pin No.</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>GND</td>
</tr>
<tr>

<tr>
<td>2</td>
<td>Speed Control</td>
</tr>
<tr>
<td>3</td>
<td>Sense</td>
</tr>
<tr>
<td>4</td>
<td>+5V</td>
</tr>
</tbody>
</table>

6) NB_FAN (North Bridge Fan Header)

Connect the North Bridge fan cable to this header. The fan header has a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation. Most fans are designed with color-coded power connector wires. A red power connector wire indicates a positive connection and requires a +12V voltage. The black connector wire is the ground wire.

<table>
<thead>
<tr>
<th>Pin No.</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>GND</td>
</tr>
<tr>
<td>2</td>
<td>+12V</td>
</tr>
<tr>
<td>3</td>
<td>NC</td>
</tr>
</tbody>
</table>

- Be sure to connect fan cables to the fan headers to prevent your CPU, North Bridge and system from overheating. Overheating may result in damage to the CPU/North Bridge or the system may hang.
- These fan headers are not configuration jumper blocks. Do not place a jumper cap on the headers.
7) **FDD (Floppy Disk Drive Connector)**

This connector is used to connect a floppy disk drive. The types of floppy disk drives supported are: 360 KB, 720 KB, 1.2 MB, 1.44 MB, and 2.88 MB. Before connecting a floppy disk drive, be sure to locate pin 1 of the connector and the floppy disk drive cable. The pin 1 of the cable is typically designated by a stripe of different color.

8) **IDE (IDE Connector)**

The IDE connector supports up to two IDE devices such as hard drives and optical drives. Before attaching the IDE cable, locate the foolproof groove on the connector. If you wish to connect two IDE devices, remember to set the jumpers and the cabling according to the role of the IDE devices (for example, master or slave). (For information about configuring master/slave settings for the IDE devices, read the instructions from the device manufacturers.)
9) SATAII0/1/2/3/4/5 (SATA 3Gb/s Connectors, Controlled by ICH9R)

The SATA connectors conform to SATA 3Gb/s standard and are compatible with SATA 1.5Gb/s standard. Each SATA connector supports a single SATA device. The ICH9R controller supports RAID 0, RAID 1, RAID 5 and RAID 10. Refer to Chapter 5, "Configuring SATA Hard Drive(s)," for instructions on configuring a RAID array.

<table>
<thead>
<tr>
<th>Pin No.</th>
<th>Definition</th>

</tr>
</tbody>
</table>

10) GSATAIIA/GSATAIIB (SATA 3Gb/s Connectors, Controlled by GIGABYTE SATA2, Purple)

The SATA connectors conform to SATA 3Gb/s standard and are compatible with SATA 1.5Gb/s standard. Each SATA connector supports a single SATA device. The GIGABYTE SATA2 controller supports RAID 0 and RAID 1. Refer to Chapter 5, "Configuring SATA Hard Drive(s)," for instructions on configuring a RAID array.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Please connect the L-shaped end of the SATA 3Gb/s cable to your SATA hard drive.

- A RAID 0 or RAID 1 configuration requires at least two hard drives. If more than two hard drives are to be used, the total number of hard drives must be an even number.
- A RAID 5 configuration requires at least three hard drives. (The total number of hard drives does not have to be an even number.)
- A RAID 10 configuration requires at least four hard drives and the total number of hard drives must be an even number.
11) PWR_LED (System Power LED Header)
This header can be used to connect a system power LED on the chassis to indicate system power status. The LED is on when the system is operating. The LED keeps blinking when the system is in S1 sleep state. The LED is off when the system is in S3/S4 sleep state or powered off (S5).

<table>
<thead>

<tr>
<td>S3/S4/S5</td>
<td>Off</td>
</tr>
</tbody>
</table>

12) BAT (BATTERY)
The battery provides power to keep the values (such as BIOS configurations, date, and time information) in the CMOS when the computer is turned off. Replace the battery when the battery voltage drops to a low level, or the CMOS values may not be accurate or may be lost.

- Always turn off your computer and unplug the power cord before replacing the battery.
- Replace the battery with an equivalent one. Danger of explosion if the battery is replaced with an incorrect model.
- Contact the place of purchase or local dealer if you are not able to replace the battery by yourself or uncertain about the battery model.
- When installing the battery, note the orientation of the positive side (+) and the negative side (-) of the battery (the positive side should face up).
- Used batteries must be handled in accordance with local environmental regulations.

You may clear the CMOS values by removing the battery:
1. Turn off your computer and unplug the power cord.
2. Gently remove the battery from the battery holder and wait for one minute. (Or use a metal object like a screwdriver to touch the positive and negative terminals of the battery holder, making them short for 5 seconds.)
3. Replace the battery.
4. Plug in the power cord and restart your computer.
13) **F_PANEL (Front Panel Header)**

Connect the power switch, reset switch, speaker and system status indicator on the chassis front panel to this header according to the pin assignments below. Note the positive and negative pins before connecting the cables.

- **PW (Power Switch, Red):** Connects to the power switch on the chassis front panel. You may configure the way to turn off your system using the power switch (refer to Chapter 2, "BIOS Setup," "Power Management Setup," for more information).

- **SPEAK (Speaker, Orange):** Connects to the speaker on the chassis front panel. The system reports system startup status by issuing a beep code. One single short beep will be heard if no problem is detected at system startup. If a problem is detected, the BIOS may issue beeps in different patterns to indicate the problem. Refer to Chapter 5, "Troubleshooting," for information about beep codes.

- **HD (Hard Drive Activity LED, Blue):** Connects to the hard drive activity LED on the chassis front panel. The LED is on when the hard drive is reading or writing data.

- **RES (Reset Switch, Green):** Connects to the reset switch on the chassis front panel. Press the reset switch to restart the computer if the computer freezes and fails to perform a normal restart.

- **NC (Purple):** No connection

<table>

The front panel design may differ by chassis. A front panel module mainly consists of power switch, reset switch, power LED, hard drive activity LED, speaker and etc. When connecting your chassis front panel module to this header, make sure the wire assignments and the pin assignments are matched correctly.
14) **F_AUDIO (Front Panel Audio Header)**

The front panel audio header supports Intel High Definition audio (HD) and AC'97 audio. You may connect your chassis front panel audio module to this header. Make sure the wire assignments of the module connector match the pin assignments of the motherboard header. Incorrect connection between the module connector and the motherboard header will make the device unable to work or even damage it.

![Diagram of F_AUDIO header]

**NOTE**
- The front panel audio header supports HD audio by default. If your chassis provides an AC'97 front panel audio module, refer to the instructions on how to activate AC'97 functionality via the audio software in Chapter 5, "Configuring 2/4/5.1/7.1-Channel Audio."
- When using an AC'97 front panel audio module, you can use either the front or the back panel audio connectors, but not both at the same time.
- Some chassis provide a front panel audio module that has separated connectors on each wire instead of a single plug. For information about connecting the front panel audio module that has different wire assignments, please contact the chassis manufacturer.

### Pin No. Definition

</table>

17) **SPDIF O (S/PDIF Out Header)**

This header supports digital S/PDIF out and connects a S/PDIF digital audio cable (provided by expansion cards) for digital audio output from your motherboard to certain expansion cards like graphics cards and sound cards. For example, some graphics cards may require you to use a S/PDIF digital audio cable for digital audio output from your motherboard to your graphics card if you wish to connect an HDMI display to the graphics card and have digital audio output from the HDMI display at the same time. For information about connecting the S/PDIF digital audio cable, carefully read the manual for your expansion card.

</tbody>
</table>

- Do not plug the IEEE 1394 bracket (2x5-pin) cable into the USB header.
- Prior to installing the USB bracket, be sure to turn off your computer and unplug the power cord from the power outlet to prevent damage to the USB bracket.

19) **F_1394 (IEEE 1394a Header, Gray)**

The header conforms to IEEE 1394a specification. The IEEE 1394a header can provide one IEEE 1394a port via an optional IEEE 1394a bracket. For purchasing the optional IEEE 1394a bracket, please contact the local dealer.

<table>

24) CLR_CMOS (Clearing CMOS Jumper)

Use this jumper to clear the CMOS values (e.g. date information and BIOS configurations) and reset the CMOS values to factory defaults. To clear the CMOS values, place a jumper cap on the two pins to temporarily short the two pins or use a metal object like a screwdriver to touch the two pins for a few seconds.

- Always turn off your computer and unplug the power cord from the power outlet before clearing the CMOS values.
- After clearing the CMOS values and before turning on your computer, be sure to remove the jumper cap from the jumper. Failure to do so may cause damage to the motherboard.
- After system restart, go to BIOS Setup to load factory defaults (select Load Optimized Defaults) or manually configure the BIOS settings (refer to Chapter 2, "BIOS Setup," for BIOS configurations).

25) V_PHASE LED

The number of lighted LEDs indicates the CPU loading. The higher the CPU loading, the more the number of lighted LEDs.
Chapter 2  BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the CMOS on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters and loading operating system, etc. BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <Delete> key during the POST when the power is turned on. To see more advanced BIOS Setup menu options, you can press <Ctrl> + <F1> in the main menu of the BIOS Setup program.

To upgrade the BIOS, use either the GIGABYTE Q-Flash or @BIOS utility.

- Q-Flash allows the user to quickly and easily upgrade or back up BIOS without entering the operating system.
- @BIOS is a Windows-based utility that searches and downloads the latest version of BIOS from the Internet and updates the BIOS.

For instructions on using the Q-Flash and @BIOS utilities, refer to Chapter 4, "BIOS Update Utilities."

- Because BIOS flashing is potentially risky, if you do not encounter problems using the current version of BIOS, it is recommended that you not flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- BIOS will emit a beep code during the POST. Refer to Chapter 5, "Troubleshooting," for the beep codes description.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the "Load Optimized Defaults" section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 1 for how to clear the CMOS values.)
2-1 Startup Screen

The following screens may appear when the computer boots.

A. The LOGO Screen (Default)

![GIGABYTE 6-QUAD Motherboard]

Function Keys:

- **<TAB>: POST Screen**
  - Press the <Tab> key to show the BIOS POST screen. To show the BIOS POST screen at system startup, refer to the instructions on the Full Screen LOGO Show item on page 44.

- **<DEL>: BIOS Setup/Q-Flash**
  - Press the <Delete> key to enter BIOS Setup.

- **<F9>: Xpress Recovery2**
  - If you have ever entered Xpress Recovery2 to back up hard drive data using the motherboard driver disk, the <F9> key can be used for subsequent access to XpressRecovery2 during the POST. For more information, refer to Chapter 4, "Xpress Recovery2."

- **<F12>: Boot Menu**
  - Boot Menu allows you to set the first boot device without entering BIOS Setup. In Boot Menu, use the up arrow key <↑> or the down arrow key <↓> to select the first boot device, then press <Enter> to accept. To exit Boot Menu, press <Esc>. The system will directly boot from the device configured in Boot Menu.

  Note: The setting in Boot Menu is effective for one time only. After system restart, the device boot order will still be based on BIOS Setup settings. You can access Boot Menu again to change the first boot device setting as needed.

- **<End>: Q-Flash**
  - Press the <End> key to access the Q-Flash utility directly without having to enter BIOS Setup first.

B. The POST Screen

![Award Modular BIOS v6.00PG, An Energy Star Ally Copyright (C) 1984-2007, Award Software, Inc.]

Function Keys:

- **<TAB>**: POST Screen
  - Press the <Tab> key to show the BIOS POST screen. To show the BIOS POST screen at system startup, refer to the instructions on the Full Screen LOGO Show item on page 44.

- **<DEL>: BIOS Setup**
  - Press the <Delete> key to enter BIOS Setup.

- **<F9>: Xpress Recovery2**
  - If you have ever entered Xpress Recovery2 to back up hard drive data using the motherboard driver disk, the <F9> key can be used for subsequent access to XpressRecovery2 during the POST. For more information, refer to Chapter 4, "Xpress Recovery2."

- **<F12>: Boot Menu**
  - Boot Menu allows you to set the first boot device without entering BIOS Setup. In Boot Menu, use the up arrow key <↑> or the down arrow key <↓> to select the first boot device, then press <Enter> to accept. To exit Boot Menu, press <Esc>. The system will directly boot from the device configured in Boot Menu.

  Note: The setting in Boot Menu is effective for one time only. After system restart, the device boot order will still be based on BIOS Setup settings. You can access Boot Menu again to change the first boot device setting as needed.

- **<End>: Q-Flash**
  - Press the <End> key to access the Q-Flash utility directly without having to enter BIOS Setup first.
2-2 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter a sub-menu.

(Sample BIOS Version: F2t)

![BIOS Setup Program Function Keys](image)

| ESC: Quit | ↑↓←→: Select Item | F11: Save CMOS to BIOS |
| F8: Q-Flash | F10: Save & Exit Setup | F12: Load CMOS from BIOS |

**BIOS Setup Program Function Keys**

- `<↑>`, `<↓>`, `<←>`, `<→>`: Move the selection bar to select an item
- `<Enter>`: Execute command or enter the submenu
- `<Esc>`: Main Menu: Exit the BIOS Setup program
- `<Page Up>`: Increase the numeric value or make changes
- `<Page Down>`: Decrease the numeric value or make changes
- `<F1>`: Show descriptions of the function keys
- `<F2>`: Move cursor to the Item Help block on the right (submenus only)
- `<F5>`: Restore the previous BIOS settings for the current submenus
- `<F6>`: Load the Fail-Safe BIOS default settings for the current submenus
- `<F7>`: Load the Optimized BIOS default settings for the current submenus
- `<F8>`: Access the Q-Flash utility
- `<F9>`: Display system information
- `<F10>`: Save all the changes and exit the BIOS Setup program
- `<F11>`: Save CMOS to BIOS
- `<F12>`: Load CMOS from BIOS

**Main Menu Help**
The onscreen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

**Submenu Help**
While in a submenu, press `<F1>` to display a help screen (General Help) of function keys available for the menu. Press `<Esc>` to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

- If you do not find the settings you want in the Main Menu or a submenu, press `<Ctrl>+<F1>` to access more advanced options.
- When the system is not stable as usual, select the **Load Optimized Defaults** item to set your system to its defaults.
- The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.
The Functions of the <F11> and <F12> keys (For the Main Menu Only)

- **F11 : Save CMOS to BIOS**
  This function allows you to save the current BIOS settings to a profile. You can create up to 8 profiles (Profile 1-8) and name each profile. First enter the profile name (to erase the default profile name, use the SPACE key) and then press <Enter> to complete.

- **F12 : Load CMOS from BIOS**
  If your system becomes unstable and you have loaded the BIOS default settings, you can use this function to load the BIOS settings from a profile created before, without the hassles of reconfiguring the BIOS settings. First select the profile you wish to load, then press <Enter> to complete.

**Standard CMOS Features**
Use this menu to configure the system time and date, hard drive types, floppy disk drive types, and the type of errors that stop the system boot, etc.

**Advanced BIOS Features**
Use this menu to configure the device boot order, advanced features available on the CPU, and the primary display adapter.

**Integrated Peripherals**
Use this menu to configure all peripheral devices, such as IDE, SATA, USB, integrated audio, and integrated LAN, etc.

**Power Management Setup**
Use this menu to configure all the power-saving functions.

**PnP/PCI Configurations**
Use this menu to configure the system's PCI & PnP resources.

**PC Health Status**
Use this menu to see information about autodetected system/CPU temperature, system voltage and fan speed, etc.

**MB Intelligent Tweaker(M.I.T.)**
Use this menu to configure the clock, frequency and voltages of your CPU, memory, etc.

**Load Fail-Safe Defaults**
Fail-Safe defaults are factory settings for the most stable, minimal-performance system operations.

**Load Optimized Defaults**
Optimized defaults are factory settings for optimal-performance system operations.

**Set Supervisor Password**
Change, set, or disable password. It allows you to restrict access to the system and BIOS Setup. A supervisor password allows you to make changes in BIOS Setup.

**Set User Password**
Change, set, or disable password. It allows you to restrict access to the system and BIOS Setup. An user password only allows you to view the BIOS settings but not to make changes.

**Save & Exit Setup**
Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

**Exit Without Saving**
Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

Date
Sets the system date. The date format is week (read-only), month, date and year. Select the desired field and use the up arrow or down arrow key to set the date.

Time
Sets the system time. For example, 1 p.m. is 13:0:0. Select the desired field and use the up arrow or down arrow key to set the time.

IDE Channel 0/1 Master/Slave
IDE HDD Auto-Detection
Press <Enter> to autodetect the parameters of the IDE/SATA device on this channel.
IDE Channel 0/1 Master/Slave
Configure your IDE/SATA devices by using one of the three methods below:
- **Auto**  Lets BIOS automatically detect IDE/SATA devices during the POST. (Default)
- **None**  If no IDE/SATA devices are used, set this item to **None** so the system will skip the detection of the device during the POST for faster system startup.
- **Manual**  Allows you to manually enter the specifications of the hard drive when the hard drive access mode is set to **CHS**.

**Access Mode**  Sets the hard drive access mode. Options are: Auto (default), CHS, LBA, Large.

**IDE Channel 2/3 Master, IDE Channel 4/5 Master/Slave**

- **Auto**  Lets BIOS automatically detect IDE/SATA devices during the POST. (Default)
- **None**  If no IDE/SATA devices are used, set this item to **None** so the system will skip the detection of the device during the POST for faster system startup.

**Access Mode**  Sets the hard drive access mode. Options are: Auto (default), Large.

The following fields display your hard drive specifications. If you wish to enter the parameters manually, refer to the information on the hard drive.

- **Capacity** Approximate capacity of the currently installed hard drive.
- **Cylinder** Number of cylinders.
- **Head** Number of heads.
- **Precomp** Write precompensation cylinder.
- **Landing Zone** Landing zone.
- **Sector** Number of sectors.

**Drive A**

- **Auto**  Lets BIOS automatically detect IDE/SATA devices during the POST. (Default)
- **None**  If no IDE/SATA devices are used, set this item to **None** so the system will skip the detection of the device during the POST for faster system startup.

**Access Mode**  Sets the hard drive access mode. Options are: Auto (default), Large.

**Floppy 3 Mode Support**

- **Disabled** (default), Drive A.

**Halt on**

- **No Errors**  The system boot will not stop for any error.
- **All Errors**  Whenever the BIOS detects a non-fatal error the system boot will stop.
- **All, But Keyboard**  The system boot will not stop for a keyboard error but stop for all other errors. (Default)
- **All, But Diskette**  The system boot will not stop for a floppy disk drive error but stop for all other errors.
- **All, But Disk/Key**  The system boot will not stop for a keyboard or a floppy disk drive error but it will stop for all other errors.

**Memory**

- **Base Memory**  Also called conventional memory. Typically, 640 KB will be reserved for the MS-DOS operating system.
- **Extended Memory**  The amount of extended memory.
- **Total Memory**  The total amount of memory installed on the system.
### Advanced BIOS Features

<table>
<thead>
<tr>
<th>Item Help</th>
<th>Menu Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item Help</td>
<td>Menu Level</td>
</tr>
</tbody>
</table>

#### Hard Disk Boot Priority
Specifies the sequence of loading the operating system from the installed hard drives. Use the up or down arrow key to select a hard drive, then press the plus key (or PageUp) or the minus key (or PageDown) to move it up or down on the list. Press <Esc> to exit this menu when finished.

#### First/Second/Third Boot Device
Specifies the boot order from the available devices. Use the up or down arrow key to select a device and press <Enter> to accept. Options are: Floppy, LS120, Hard Disk, CDROM, ZIP, USB-FDD, USB-ZIP, USB-CDROM, USB-HDD, Legacy LAN, Disabled.

#### Password Check
Specifies whether a password is required every time the system boots, or only when you enter BIOS Setup. After configuring this item, set the password(s) under the Set Supervisor/User Password item in the BIOS Main Menu.

- **Setup**
  - A password is only required for entering the BIOS Setup program. (Default)
- **System**
  - A password is required for booting the system and for entering the BIOS Setup program.

#### HDD S.M.A.R.T. Capability
Enables or disables the S.M.A.R.T. (Self Monitoring and Reporting Technology) capability of your hard drive. This feature allows your system to report read/write errors of the hard drive and to issue warnings when a third party hardware monitor utility is installed. (Default: Disabled)

(Note) This item is present only if you install a CPU that supports this feature. For more information about Intel CPUs' unique features, please visit Intel's website.
Limit CPUID Max. to 3 (Note)
Allows you to determine whether to limit CPUID maximum value. Set this item to Disabled for Windows XP operating system; set this item to Enabled for legacy operating system such as Windows NT4.0. (Default: Disabled)

No-Execute Memory Protect (Note)
Enables or disables Intel® Execute Disable Bit function. This function may enhance protection for the computer, reducing exposure to viruses and malicious buffer overflow attacks when working with its supporting software and system. (Default: Enabled)

CPU Enhanced Halt (C1E) (Note)
Enables or disables Intel® CPU Enhanced Halt (C1E) function, a CPU power-saving function in system halt state. When enabled, the CPU core frequency and voltage will be reduced during system halt state to decrease power consumption. (Default: Enabled)

CPU Thermal Monitor 2 (TM2) (Note)
Enables or disables Intel® CPU Thermal Monitor (TM2) function, a CPU overheating protection function. When enabled, the CPU core frequency and voltage will be reduced when the CPU is overheated. (Default: Enabled)

CPU EIST Function (Note)
Enables or disables Enhanced Intel SpeedStep Technology (EIST). Depending on CPU loading, Intel® EIST technology can dynamically and effectively lower the CPU voltage and core frequency to decrease average power consumption and heat production. (Default: Enabled)

Virtualization Technology (Note)
Enables or disables Intel® Virtualization Technology. Virtualization enhanced by Intel® Virtualization Technology will allow a platform to run multiple operating systems and applications in independent partitions. With virtualization, one computer system can function as multiple virtual systems. (Default: Enabled)

Full Screen LOGO Show
Allows you to determine whether to display the GIGABYTE Logo at system startup. Disabled displays normal POST message. (Default: Enabled)

Init Display First
Specifies the first initiation of the monitor display from the installed PCI graphics card or PCI Express graphics card.
- PCI Sets the PCI graphics card as the first display. (Default)
- PEG Sets PCI Express graphics card on the first PCI Express x16 slot (PCIE_16_1) as the first display.
- PEG2 Sets PCI Express graphics card on the second PCI Express x16 slot (PCIE_16_2) as the first display.

(Note) This item is present only if you install a CPU that supports this feature. For more information about Intel CPUs' unique features, please visit Intel's website.

CMOS Setup Utility-Copyright (C) 1984-2007 Award Software
Integrated Peripherals

Parallel Port Mode

SATA RAID/AHCI Mode (Intel ICH9R Southbridge)
Enables or disables RAID for the SATA controllers integrated in the Intel ICH9R Southbridge or configures the SATA controllers to AHCI mode.

- **Disabled**: Disables RAID for the SATA controllers and configures the SATA controllers to PATA mode. (Default)
- **AHCI**: Configures the SATA controllers to AHCI mode. Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced Serial ATA features such as Native Command Queuing and hot plug.
- **RAID**: Enables RAID for the SATA controllers.
SATA Port0-3 Native Mode (Intel ICH9R Southbridge)
Specifies the operating mode of the integrated SATA controllers.
  ➤ Disable: Allows the SATA controllers to operate in Legacy IDE mode.
  In Legacy mode the SATA controllers use dedicated IRQs that cannot be shared with other device. Set this option to Disable if you wish to install operating systems that do not support Native mode, e.g. Windows 9X/ME. (Default)
  ➤ Enable: Allows the SATA controllers to operate in Native IDE mode.
Enable Native IDE mode if you wish to install operating systems that support Native mode, e.g. Windows XP/2000.

USB Controller
Enables or disables the integrated USB controller. (Default: Enabled)
  Disable: will turn off all of the USB functionalities below.

USB 2.0 Controller
Enables or disables the integrated USB 2.0 controller. (Default: Enabled)

USB Keyboard Support
Allows USB keyboard to be used in MS-DOS. (Default: Disabled)

USB Mouse Support
Allows USB mouse to be used in MS-DOS. (Default: Disabled)

Legacy USB storage detect
Determines whether to detect USB storage devices, including USB flash drives and USB hard drives during the POST. (Default: Enabled)

Azalia Codec
Enables or disables the onboard audio function. (Default: Auto)
If you wish to install a 3rd party add-in audio card instead of using the onboard audio, set this item to Disable.

Onboard H/W 1394
Enables or disables the onboard IEEE 1394 function. (Default: Enabled)

Onboard H/W LAN1 (LAN port)
Enables or disables the onboard LAN function. (Default: Enabled)
If you wish to install a 3rd party add-in network card instead of using the onboard LAN, set this item to Disable.

Onboard H/W LAN2 (LAN2 port)
Enables or disables the onboard LAN function. (Default: Enabled)
If you wish to install a 3rd party add-in network card instead of using the onboard LAN, set this item to Disable.
SMART LAN1/LAN2 (LAN Cable Diagnostic Function)

This motherboard incorporates cable diagnostic feature designed to detect the status of the attached LAN cable. This feature will detect cabling issue and report the approximate distance to the fault or short. Refer to the following information for diagnosing your LAN cable:

**When No LAN Cable Is Attached...**
If no LAN cable is attached to the motherboard, the **Status** fields of all four pairs of wires will show **Open** and the **Length** fields show **0.0m**, as shown in the figure above.

**When LAN Cable Is Functioning Normally...**
If no cable problem is detected on the LAN cable connected to a Gigabit hub or a 10/100 Mbps hub, the following message will appear:

- Link Detected Displays transmission speed
- Cable Length Displays the approximate length of the attached LAN cable.

Note: The Gigabit hub will only operate at a speed of 10/100 Mbps in MS-DOS mode; it will operate at a normal speed of 10/100/1000 Mbps in Windows mode or when the LAN Boot ROM is activated.

**When a Cable Problem Occurs...**
If a cable problem occurs on a specified pair of wires, the **Status** field will show **Short** and then length shown will be the approximate distance to the fault or short.

**Example:** Part1-2 Status = Short / Length = 1.6m
Explanation: A fault or short might occur at about 1.6m on Part 1-2.

Note: Part 4-5 and Part 7-8 are not used in a 10/100 Mbps environment, so their **Status** fields will show **Open**, and the length shown is the approximate length of the attached LAN cable.
Onboard LAN1 Boot ROM (LAN port)
Allows you to decide whether to activate the boot ROM integrated with the onboard LAN chip.
(Default: Disabled)

Onboard LAN2 Boot ROM (LAN2 port)
Allows you to decide whether to activate the boot ROM integrated with the onboard LAN chip.
(Default: Disabled)

Onboard SATA/IDE Device (GIGABYTE SATA2 Chip)
Enables or disables the IDE and SATA controllers integrated in the GIGABYTE SATA 2 chip.
(Default: Enabled)

Onboard SATA/IDE Ctrl Mode (GIGABYTE SATA2 Chip)
Enables or disables RAID for the SATA controller integrated in the GIGABYTE SATA 2 chip or configures the SATA controller to AHCI mode.

IDE       Disables RAID for the SATA controller and configures the SATA controller to PATA mode. (Default)
AHCI      Configures the SATA controller to AHCI mode. Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced Serial ATA features such as Native Command Queuing and hot plug.
RAID/IDE  Enables RAID for the SATA controller. (The IDE controller still operates in PATA mode)

Onboard Serial Port 1
Enables or disables the first serial port and specifies its base I/O address and corresponding interrupt. Options are: Auto, 3F8/IRQ4 (default), 2F8/IRQ3, 3E8/IRQ4, 2E8/IRQ3, Disabled.

Onboard Parallel Port
Enables or disables the onboard parallel port (LPT) and specifies its base I/O address and corresponding interrupt. Options are: 378/IRQ7 (default), 278/IRQ5, 3BC/IRQ7, Disabled.

Parallel Port Mode
Selects an operating mode for the onboard parallel (LPT) port. Options are: SPP (Standard Parallel Port)(default), EPP (Enhanced Parallel Port), ECP (Extended Capabilities Port), ECP+EPP.
2-6 Power Management Setup

<table>
<thead>
<tr>
<th>Item Help</th>
<th>Menu Level</th>
</tr>
</thead>
</table>

| ACPI Suspend Type | [S3(STR)] |
| Soft-Off by PWR-BTTN | [Instant-Off] |
| PME Event Wake Up | [Enabled] |
| Power On by Ring | [Enabled] |
| Resume by Alarm | [Disabled] |
| x Date (of Month) Alarm | Everyday |
| x Time (hh:mm:ss) Alarm | 0:0:0 |
| HPET Support [Base] | [Enabled] |
| HPET Mode [Base] | [32-bit mode] |
| Power On By Mouse | [Disabled] |
| Power On By Keyboard | [Disabled] |
| x KB Power On Password | Enter |
| AC Back Function | [Soft-Off] |

- **ACPI Suspend Type**
  - Specifies the ACPI sleep state when the system enters suspend.
  - **S1(POS)** Enables the system to enter the ACPI S1 (Power on Suspend) sleep state. In S1 sleep state, the system appears suspended and stays in a low power mode. The system can be resumed at any time.
  - **S3(STR)** Enables the system to enter the ACPI S3 (Suspend to RAM) sleep state (default). In S3 sleep state, the system appears to be off and consumes less power than in the S1 state. When signaled by a wake-up device or event, the system resumes to its working state exactly where it was left off.

- **Soft-Off by PWR-BTTN**
  - Configures the way to turn off the computer in MS-DOS mode using the power button.
  - **Instant-Off** Press the power button and then the system will be turned off instantly. (Default)
  - **Delay 4 Sec.** Press and hold the power button for 4 seconds to turn off the system. If the power button is pressed for less than 4 seconds, the system will enter suspend mode.

- **PME Event Wake Up**
  - Allows the system to be awakened from an ACPI sleep state by a wake-up signal from a PCI or PCIe device. Note: To use this function, you need an ATX power supply providing at least 1A on the +5VSB lead. (Default: Enabled)

- **Power On by Ring**
  - Allows the system to be awakened from an ACPI sleep state by a wake-up signal from a modem that supports wake-up function. (Default: Enabled)

(Note) Supported on Windows® Vista® operating system only.
_resume by Alarm
Determines whether to power on the system at a desired time. (Default: Disabled)
If enabled, set the date and time as following:
- Date (of Month) Alarm: Turn on the system at a specific time on each day or on a specific day in a month.
- Time (hh: mm: ss) Alarm: Set the time at which the system will be powered on automatically.
Note: When using this function, avoid inadequate shutdown from the operating system or removal of the AC power, or the settings may not be effective.

HPET Support (Note)
Enables or disables High Precision Event Timer (HPET) for Windows® Vista® operating system.
(Default: Enabled)

HPET Mode (Note)
Allows you to select the HPET mode for your Windows® Vista® operating system. Select 32-bit mode when you install 32-bit Windows® Vista®; select 64-bit mode when you install 64-bit Windows® Vista®. (Default: 32-bit mode)

Power On By Mouse
Allows the system to be turned on by a PS/2 mouse wake-up event.
Note: To use this function, you need an ATX power supply providing at least 1A on the +5VSB lead.
- Disabled: Disables this function. (Default)
- Double Click: Double click on left button on the PS/2 mouse to turn on the system.

Power On By Keyboard
Allows the system to be turned on by a PS/2 keyboard wake-up event.
Note: you need an ATX power supply providing at least 1A on the +5VSB lead.
- Disabled: Disables this function. (Default)
- Password: Set a password with 1~5 characters to turn on the system.
- Keyboard 98: Press POWER button on the Windows 98 keyboard to turn on the system.

KB Power ON Password
Set the password when Power On by Keyboard is set to Password. Press <Enter> on this item and set a password with up to 5 characters and then press <Enter> to accept. To turn on the system, enter the password and press <Enter>.
Note: To cancel the password, press <Enter> on this item. When prompted for the password, press <Enter> again without entering the password to clear the password settings.

AC Back Function
Determines the state of the system after the return of power from an AC power loss.
- Soft-Off: The system stays off upon the return of the AC power. (Default)
- Full-On: The system is turned on upon the return of the AC power.
- Memory: The system returns to its last known awake state upon the return of the AC power.

(Note) Supported on Windows® Vista® operating system only.
## 2-7 PnP/PCI Configurations

<table>
<thead>
<tr>
<th>PnP/PCI Configurations</th>
<th>Item Help</th>
</tr>
</thead>
<tbody>
<tr>
<td>PCI1 IRQ Assignment</td>
<td>[Auto]</td>
</tr>
<tr>
<td>PCI2 IRQ Assignment</td>
<td>[Auto]</td>
</tr>
</tbody>
</table>

**PCI1 IRQ Assignment**

- **Auto**: BIOS auto-assigns IRQ to the first PCI slot. (Default)
- **3,4,5,7,9,10,11,12,14,15**: Assigns IRQ 3,4,5,7,9,10,11,12,14,15 to the first PCI slot.

**PCI2 IRQ Assignment**

- **Auto**: BIOS auto-assigns IRQ to the second PCI slot. (Default)
- **3,4,5,7,9,10,11,12,14,15**: Assigns IRQ 3,4,5,7,9,10,11,12,14,15 to the second PCI slot.

- **Reset Case Open Status**
  Keeps or clears the record of previous chassis intrusion status. **Enabled** clears the record of previous chassis intrusion status and the **Case Opened** field will show "No" at next boot. (Default: Disabled)

- **Case Opened**
  Displays the detection status of the chassis intrusion detection device attached to the motherboard CI header. If the system chassis cover is removed, this field will show "Yes", otherwise it will show "No". To clear the chassis intrusion status record, set **Reset Case Open Status** to **Enabled**, save the settings to CMOS, and then restart your system.

- **Current Voltage(V) Vcore/DDR18V/+3.3V/+12V**
  Displays the current system voltages.

- **Current System/CPU Temperature**
  Displays current system/CPU temperature.

- **Current CPU/SYSTEM/POWER FAN Speed (RPM)**
  Displays current CPU/system/power fan speed.

- **CPU Warning Temperature**
  Sets the warning threshold for CPU temperature. When CPU temperature exceeds the threshold, BIOS will emit warning sound. Options are: Disabled (default), 60°C/140°F, 70°C/158°F, 80°C/176°F, 90°C/194°F.

- **CPU/SYSTEM/POWER FAN Fail Warning**
  Allows the system to emit warning sound if the CPU/system/power fan is not connected or fails. Check the fan condition or fan connection when this occurs. (Default: Disabled)
CPU Smart FAN Control
Enables or disables the CPU fan speed control function. Enabled allows the CPU fan to run at different speed according to the CPU temperature. You can adjust the fan speed with EasyTune based on system requirements. If disabled, CPU fan runs at full speed. (Default: Enabled)

CPU Smart FAN Mode
Specifies how to control CPU fan speed. This item is configurable only if CPU Smart FAN Control is set to Enabled.

- **Auto**
  Lets BIOS autodetect the type of CPU fan installed and sets the optimal CPU fan control mode. (Default)

- **Voltage**
  Sets Voltage mode for a 3-pin CPU fan.

- **PWM**
  Sets PWM mode for a 4-pin CPU fan.

Note: The Voltage mode can be set for a 3-pin CPU fan or a 4-pin CPU fan. However, for a 4-pin CPU fan that is not designed following Intel PWM fan specifications, selecting PWM mode may not effectively reduce the fan speed.
2-9 MB Intelligent Tweaker(M.I.T.)

- Incorrectly doing overclock/overvoltage may result in damage to CPU, chipset, or memory and reduce the useful life of these components. This page is for advanced users only and we recommend you not to alter the default settings to prevent system instability or other unexpected results. (Inadequately altering the settings may result in system's failure to boot. If this occurs, clear the CMOS values and reset the board to default values.)

- When the **System Voltage Optimized** item blinks in red, it is recommended that you set the **System Voltage Control** item to **Auto** to optimize the system voltage settings.

(Note) This item appears only if you install a CPU that supports this feature.
Robust Graphics Booster
Robust Graphics Booster (R.G.B.) helps to enhance the performance of the graphics chip and memory. Auto allows the BIOS to automatically set the R.G.B. mode based on system configurations. Options are: Auto (default), Fast, Turbo.

CPU Clock Ratio (Note)
Allows you to alter the clock ratio for the installed CPU. The item is present only if a CPU with unlocked clock ratio is installed.

CPU Frequency
Displays the current operating CPU frequency.

CPU Host Clock Control
Enables or disables the control of CPU host clock. Enabled will allow the CPU Host Frequency item below to be configurable. Note: If your system fails to boot after overclocking, please wait for 20 seconds to allow for automated system reboot, or clear the CMOS values to reset the board to default values. (Default: Disabled)

CPU Host Frequency (Mhz)
Allows you to manually set the CPU host frequency. This item is configurable only if the CPU Host Clock Control option is enabled.
For an 800 MHz FSB CPU, set this item to 200 MHz.
For a 1066 MHz FSB CPU, set this item to 266 MHz.
For a 1333 MHz FSB CPU, set this item to 333 MHz.
For a 1600 MHz FSB CPU, set this item to 400 MHz.
Important It is highly recommended that the CPU frequency be set in accordance with the CPU specifications.

PCI Express Frequency (Mhz)
Allows you to manually set the PCIe clock frequency. The adjustable range is from 90 MHz to 150 MHz. Auto sets the PCIe clock frequency to standard 100 MHz. (Default: Auto)

C.I.A.2
CPU Intelligent Accelerator 2 (C.I.A.2) is designed to automatically adjust CPU computing power to maximize system performance. C.I.A.2 allows your system bus to be changed dynamically based on CPU loading through the use of 5 preset states.
Note: System stability varies, depending on your system hardware components.
	Disabled Disables the use of C.I.A.2. (Default)
	Cruise Increases CPU frequency by 5% or 7% depending on CPU loading.
	Sports Increases CPU frequency by 7% or 9% depending on CPU loading.
	Racing Increases CPU frequency by 9% or 11% depending on CPU loading.
	Turbo Increases CPU frequency by 15% or 17% depending on CPU loading.
	Full Thrust Increases CPU frequency by 17% or 19% depending on CPU loading.
Warning: Before using C.I.A.2, please first verify the overclocking capability of your CPU. As stability is highly dependent on system components, when system instability occurs after overclocking, lower the overclocking ratio.

(Note) This item appears only if you install a CPU that supports this feature.
Performance Enhance
Allows the system to operate at three different performance levels.
- Standard: Lets the system operate at its basic performance level.
- Turbo: Lets the system operate at its good performance level. (Default)
- Extreme: Lets the system operate at its best performance level.

System Memory Multiplier
Allows you to set the system memory multiplier. Options are dependent on CPU FSB. Auto sets memory multiplier according to memory SPD data. (Default: Auto)

Memory Frequency (Mhz)
The first memory frequency value is the normal operating frequency of the memory being used; the second is the memory frequency that is automatically adjusted according to the CPU Host Frequency (Mhz) and System Memory Multiplier settings.

DRAM Timing Selectable (SPD)
Manual allows all DRAM Timing items below to be configurable.
Options are: Auto (default), Manual.

******** Standard Timing Control ********

CAS Latency Time
Options are: Auto (default), 3~7.

DRAM RAS# to CAS# Delay
Options are: Auto (default), 1~15.

DRAM RAS# Precharge
Options are: Auto (default), 1~15.

Precharge delay (tRAS)
Options are: Auto (default), 1~63.

******** Advanced Timing Control ********

ACT to ACT Delay (tRRD)
Options are: Auto (default), 1~15.

Rank Write to READ Delay
Options are: Auto (default), 1~31.

Write To Precharge Delay
Options are: Auto (default), 1~31.

Refresh to ACT Delay
Options are: 0~255 (Default: Auto)

Read to Precharge Delay
Options are: Auto (default), 1~15.

Static tRead Value
Options are: Auto (default), 1~31.

Static tRead Phase Adjust
Options are: Auto (default), 1~31.

Command Rate(CMD)
Options are: Auto (default), 1T, 2T.
******** Clock Driving & Skew Control ********

CPU/PCIEX Clock Driving Control
Allows you to adjust the amplitude of the CPU, North Bridge and PCI Express clock.
Options are: 700mV, 800mV (default), 900mV, 1000mV.

CPU Clock Skew Control
Allows you to set the CPU clock prior to the North Bridge clock.
Options are: Normal (default), 50ps~750ps.

(G)MCH Clock Skew Control
Allows you to set the North Bridge clock prior to the CPU clock.
Options are: Normal (default), 50ps~750ps.

******** System Voltage Optimized ********

System Voltage Control
Determines whether to manually set the system voltages. Auto lets BIOS automatically set the system voltages as required. Manual allows all voltage control items below to be configurable. (Default: Manual)

DDR2 OverVoltage Control
Allows you to set memory voltage.

- Normal Supplies the memory voltage as required. (Default)
- +0.05V ~ +1.55V Increases memory voltage by 0.05V to 1.55V at 0.05V increment.

Note: Increasing memory voltage may result in damage to the memory.

PCI-E OverVoltage Control
Allows you to set PCIe voltage.

- Normal Supplies the PCIe bus voltage as required. (Default)
- +0.05V ~ +0.75V Increases PCIe bus voltage by 0.05V to 0.75V at 0.05V increment.

FSB OverVoltage Control
Allows you to set the Front Side Bus voltage.

- Normal Supplies the FSB voltage as required. (Default)
- +0.05V ~ +0.35V Increases FSB voltage by 0.05V to 0.35V at 0.05V increment.

(G)MCH OverVoltage Control
Allows you to set the North Bridge voltage.

- Normal Supplies the North Bridge voltage as required. (Default)
- +0.025V ~ +0.375V Increases North Bridge voltage by 0.025V to 0.375V at 0.025V increment.

Loadline Calibration

- Enabled Lets the BIOS fine-tune the CPU Vcore voltage. (Default)
- Disabled Disables this function.

CPU Voltage Control
Allows you to set the CPU voltage. Normal sets the CPU voltage as required. The adjustable range is dependent on the CPU being installed. (Default: Normal)

Note: Increasing CPU voltage may result in damage to your CPU or reduce the useful life of the CPU.

Normal CPU Vcore
Displays the normal operating voltage of your CPU.
2-10 Load Fail-Safe Defaults

Press <Enter> on this item and then press the <Y> key to load the safest BIOS default settings. In case system instability occurs, you may try to load Fail-Safe defaults, which are the safest and most stable BIOS settings for the motherboard.

2-11 Load Optimized Defaults

Press <Enter> on this item and then press the <Y> key to load the optimal BIOS default settings. The BIOS defaults settings helps the system to operate in optimum state. Always load the Optimized defaults after updating the BIOS or after clearing the CMOS values.
2-12 Set Supervisor/User Password

Press <Enter> on this item and type the password with up to 8 characters and then press <Enter>. You will be requested to confirm the password. Type the password again and press <Enter>.

The BIOS Setup program allows you to specify two separate passwords:

☞ **Supervisor Password**
   When a system password is set and the **Password Check** item in **Advanced BIOS Features** is set to **Setup**, you must enter the supervisor password for entering BIOS Setup and making BIOS changes.
   When the **Password Check** item is set to **System**, you must enter the supervisor password (or user password) at system startup and when entering BIOS Setup.

☞ **User Password**
   When the **Password Check** item is set to **System**, you must enter the supervisor password (or user password) at system startup to continue system boot. In BIOS Setup, you must enter the supervisor password if you wish to make changes to BIOS settings. The user password only allows you to view the BIOS settings but not to make changes.

To clear the password, press <Enter> on the password item and when requested for the password, press <Enter> again. The message "PASSWORD DISABLED" will appear, indicating the password has been cancelled.
2-13  Save & Exit Setup

Press <Enter> on this item and press the <Y> key. This saves the changes to the CMOS and exits the BIOS Setup program. Press <N> or <Esc> to return to the BIOS Setup Main Menu.

2-14  Exit Without Saving

Press <Enter> on this item and press the <Y> key. This exits the BIOS Setup without saving the changes made in BIOS Setup to the CMOS. Press <N> or <Esc> to return to the BIOS Setup Main Menu.
Chapter 3  Drivers Installation

- Before installing the drivers, first install the operating system. (The following instructions use Windows XP as the example operating system.)
- After installing the operating system, insert the motherboard driver disk into your optional drive. The driver Autorun screen is automatically displayed which looks like that shown in the screen shot below. (If the driver Autorun screen does not appear automatically, go to My Computer, double-click the optical drive and execute the Run.exe program.)

3-1 Installing Chipset Drivers

"Xpress Install " is now analyzing your computer...99%

After inserting the driver disk, "Xpress Install" will automatically scan the system and then list all the drivers that are recommended to install. Please select the item that you wish to install and press the Install button following the item. Or you can press Xpress Install to install all the driver items.

- Please ignore the popup dialog box(es) (e.g. the Found New Hardware Wizard) displayed when "Xpress Install" is installing the drivers. Failure to do so may affect the driver installation.
- Some device drivers will restart your system automatically during the driver installation. After the system restart, "Xpress Install" will continue to install other drivers.
- After the drivers are installed, follow the onscreen instructions to restart your system. You can install other applications included in the motherboard driver disk.
- For USB 2.0 driver support under the Windows XP operating system, please install the Windows XP Service Pack 1 or later. After installing the SP1 (or later), if a question mark still exists in Universal Serial Bus Controller in Device Manager, please remove the question mark (by right-clicking your mouse and select Uninstall) and restart the system. (The system will then autodetect and install the USB 2.0 driver.)
3-2 Software Applications
This page displays all the tools and applications that GIGABYTE develops and some free software. You may press the Install button following an item to install it.

![Software Applications GUI]

3-3 Driver CD Information
This page provides information about the drivers, applications and tools in this driver disk.

![Driver CD Information GUI]
3-4  Hardware Information
This page provides information about the hardware devices on this motherboard.

3-5  Contact Us
Check the contacts information of the GIGABYTE headquarter in Taiwan and the overseas branch offices on the last page of this manual.
Chapter 4  Unique Features

4-1  Xpress Recovery2

Xpress Recovery2 is a utility that allows you to quickly compress and back up your system data and perform restoration of it. Supporting NTFS, FAT32, and FAT16 file systems, Xpress Recovery2 can back up data on PATA and SATA hard drives and restore it.

Before You Begin:

• Xpress Recovery2 will check the first physical hard drive* for the operating system. Xpress Recovery2 can only back up/restore the first physical hard drive that has the operating system installed.
• As Xpress Recovery2 will save the backup file at the end of the hard drive, make sure to leave enough unallocated space in advanced (10 GB or more is recommended; actual size requirements vary, depending on the amount of data).
• It is recommended to back up your system soon after the operating system and drivers are installed.
• The amount of data and hard drive access speed may affect the speed at which the data is backed up/restored.
• It takes longer to back up a hard drive than to restore it.

System Requirements:

• Intel® x86 platform
• At least 64 MB of system memory
• VESA compatible graphics card
• Windows® 2000 with SP3 or later; Windows® XP with SP1 or later

**NOTE** Xpress Recovery and Xpress Recovery2 are different utilities. For example, a backup file created with Xpress Recovery cannot be restored using Xpress Recovery2.
• USB hard drives are not supported.
• Hard drives in RAID/AHCI mode are not supported.

*** Xpress Recovery2 checks the first physical hard drive in the following sequence: The first PATA IDE connector, the second PATA IDE connector, the first SATA connector, the second SATA connector and so forth. For example, when hard drives are attached to the first IDE and the first SATA connectors, the hard drive on the first IDE connector is the first physical drive. When hard drives are attached to the first and second SATA connectors, the hard drive on the first SATA connector is the first physical drive.
Installation and Configuration
(The following procedure uses Windows XP as the example operating system.)

A. Installing Windows XP and Partitioning the Hard Drive
1. Set CD-ROM drive as the first boot device under "Advanced BIOS Features" in the BIOS Setup program. Save the changes and exit.
2. When partitioning your hard drive (Figure 1), make sure to leave unallocated space for Xpress Recovery2 (10 GB or more is recommended; actual size requirements vary, depending on the amount of data) (Figure 2).
3. Select a file system (for example, NTFS) and begin the installation of the operating system (Figure 3).
4. After the operating system is installed, right-click the **My Computer** icon on your desktop and select **Manage** (Figure 4). Go to **Computer Management** to check disk allocation. Xpress Recovery2 will save the backup file to the unallocated space (black stripe along the top) (Figure 5). Please note that if there is no enough unallocated space, Xpress Recovery2 cannot save the backup file.

5. If your hard drive is not properly partitioned before you install the operating system, you may create new partitions using free space on your hard drive (Figure 6, 7). However, if **Disk Management** shows the hard drive only contains the System partition without any unallocated space, you will not be able to create new partitions or use Xpress Recovery2. If this occurs, reinstall the operating system and re-partition your hard drive.

In the New Partition Wizard, you MUST select **Primary partition**. This will reserve unallocated space for Xpress Recovery2 to use.
B. Accessing Xpress Recovery2
1. Boot from the motherboard driver disk to access Xpress Recovery2 for the first time. When you see the following message: Press any key to startup Xpress Recovery2 (Figure 8), press any key to enter Xpress Recovery2.

2. After you use the backup function in Xpress Recovery2 for the first time, Xpress Recovery2 will stay permanent in your hard drive. If you wish to enter Xpress Recovery2 later, simply press <F9> during the POST (Figure 9).

C. Using the Backup Function in Xpress Recovery2
1. Select BACKUP to start backing up your hard drive data (Figure 10).
2. Xpress Recovery2 will then begin to search the first physical hard drive as the target drive and detect whether this hard drive contains the Windows operating system. When the Windows operating system is detected, Xpress Recovery2 will begin the backup process (Figure 11).

3. When finished, go to Disk Management to check disk allocation.

Figure 8

Figure 9

Figure 10

Figure 11

Figure 12

Xpress Recovery2 will automatically create a new partition to store the backup image file.
D. Using the Restore Function in Xpress Recovery2
Select RESTORE to restore the backup to your hard drive in case the system breaks down. The RESTORE option will not be present if no backup is created before (Figure 13, 14).

E. Removing the Backup
1. If you wish to remove the backup file, select REMOVE (Figure 15).
2. After the backup file is removed, no backup image file will be present in Disk Management and hard drive space will be freed up (Figure 16).

F. Exiting Xpress Recovery2
Select REBOOT to exit Xpress Recovery2.
4-2  BIOS Update Utilities

GIGABYTE motherboards provide two unique BIOS update tools, Q-Flash™ and @BIOS™. GIGABYTE Q-Flash and @BIOS are easy-to-use and allow you to update the BIOS without the need to enter MS-DOS mode. Additionally, this motherboard features the Dual BIOS™ design, which enhances protection for the safety and stability of your computer by adding one more physical BIOS chip.

What is Dual BIOS™?
Motherboards that support Dual BIOS have two BIOS onboard, a main BIOS and a backup BIOS. Normally, the system works on the main BIOS. However, if the main BIOS is corrupted or damaged, the backup BIOS will take over on the next system boot and copy the BIOS file to the main BIOS to ensure normal system operation. For the sake of system safety, users cannot update the backup BIOS manually.

What is Q-Flash™?
With Q-Flash you can update the system BIOS without having to enter operating systems like MS-DOS or Windows first. Embedded in the BIOS, the Q-Flash tool frees you from the hassles of going through complicated BIOS flashing process.

What is @BIOS™?
@BIOS allows you to update the system BIOS while in the Windows environment. @BIOS will download the latest BIOS file from the nearest @BIOS server site and update the BIOS.

4-2-1  Updating the BIOS with the Q-Flash Utility

A. Before You Begin:
1. From GIGABYTE’s website, download the latest compressed BIOS update file that matches your motherboard model.
2. Extract the file and save the new BIOS file (e.g. X48DQ6.F1) to your floppy disk, USB flash drive, or hard drive. Note: The USB flash drive or hard drive must use FAT32/16/12 file system.
3. Restart the system. During the POST, press the <End> key to enter Q-Flash. Note: You can access Q-Flash by either pressing the <End> key during the POST or pressing the <F8> key in BIOS Setup. However, if the BIOS update file is saved to a hard drive in RAID/AHCI mode or a hard drive attached to an independent IDE/SATA controller, use the <End> key during the POST to access Q-Flash.

Because BIOS flashing is potentially risky, please do it with caution. Inadequate BIOS flashing may result in system malfunction.
B. Updating the BIOS

When updating the BIOS, choose the location where the BIOS file is saved. The follow procedure assumes that you save the BIOS file to a floppy disk.

Step 1:
1. Insert the floppy disk containing the BIOS file into the floppy disk drive. In the main menu of Q-Flash, use the up or down arrow key to select Update BIOS from Drive and press <Enter>.
   - The Save Main BIOS to Drive option allows you to save the current BIOS file.
   - Q-Flash only supports USB flash drive or hard drives using FAT32/16/12 file system.
   - If the BIOS update file is saved to a hard drive in RAID/AHCI mode or a hard drive attached to an independent IDE/SATA controller, use the <End> key during the POST to access Q-Flash.
2. Select Floppy A and press <Enter>.
   - Do not turn off or restart the system when the system is reading/updating the BIOS.
   - Do not remove the floppy disk, USB flash drive, or hard drive when the system is updating the BIOS.

Step 2:
The process of the system reading the BIOS file from the floppy disk is displayed on the screen. When the message "Are you sure to update BIOS?" appears, press <Enter> to begin the BIOS update. The monitor will display the update process.

   - Do not turn off or restart the system when the system is reading/updating the BIOS.
   - Do not remove the floppy disk, USB flash drive, or hard drive when the system is updating the BIOS.

Step 3:
When the update process is complete, press any key to return to the main menu.
Step 4:
Press <Esc> and then <Enter> to exit Q-Flash and reboot the system. As the system boots, you should see the new BIOS version is present on the POST screen.

Step 5:
During the POST, press <Delete> to enter BIOS Setup. Select **Load Optimized Defaults** and press <Enter> to load BIOS defaults. System will re-detect all peripherals devices after a BIOS update, so we recommend that you reload BIOS defaults.

F11: Save CMOS to BIOS  
F12: Load CMOS from BIOS

^↓→←: Select Item  
Load Optimized Defaults (Y/N)? Y  
Load Fail-Safe Defaults  
Load Optimized Defaults

**Press <Y> to load BIOS defaults**

Step 6:
Select **Save & Exit Setup** and then press <Y> to save settings to CMOS and exit BIOS Setup. The procedure is complete after the system restarts.
4-2-2 Updating the BIOS with the @BIOS Utility

A. Before You Begin:
1. In Windows, close all applications and TSR (Terminate and Stay Resident) programs. This helps prevent unexpected failures when performing a BIOS update.
2. During the BIOS update process, ensure the Internet connection is stable and do NOT interrupt the Internet connection (for example, avoid a power loss or switching off the Internet). Failure to do so may result in a corrupted BIOS or a system that is unable to start.
3. Do not use the C.O.M. (Corporate Online Management) function when using @BIOS.
4. GIGABYTE product warranty does not cover any BIOS damage or system failure resulting from an inadequate BIOS flashing.

B. Installing and Using @BIOS:
Use the motherboard driver disk included with the motherboard to install @BIOS.

- Installing the @BIOS utility.
- Accessing the @BIOS utility.

C. Options and Instructions:
1. Save the Current BIOS File
   In the main dialog box of @BIOS, Save Current BIOS allows you to save the current BIOS file.

2. Update the BIOS Using the Internet Update Function
   Step 1:
   Select the Find BIOS From Gigabyte check box and click Update New BIOS.
   Step 2:
   Select the @BIOS server site closest to your location and click OK.
Step 1: Click Update New BIOS.

Step 2: In the Open dialog box, select All Files (*.*) in the Files of type list. Select the location where you save the BIOS update file (e.g. X48DQ6.F1) obtained from the Internet or through other source.

Step 3: Press OK to begin the BIOS update process. Upon completion, restart your system.

3. Update the BIOS without Using the Internet Update Function

- If more than one model is present when doing Step 3 above, recomfirm your motherboard model. Updating the BIOS with an incorrect BIOS file could result in an unbootable system.
- If the BIOS update file for your motherboard is not present on the @BIOS server site, please manually download the BIOS update file from GIGABYTE's website and follow the instructions in "Update the BIOS without Using the Internet Update Function" below.

Step 4:
As the system reboots, press <Delete> to enter the BIOS Setup program. Select Load Optimized Defaults and press <Enter> to load BIOS defaults.

Step 3:
First make sure the model name on the screen is correct, then click OK. Upon completion, restart your system.

Step 4:
As the system boots, press <Delete> to enter the BIOS Setup program. Select Load Optimized Defaults and press <Enter> to load BIOS defaults.

NOTE
- Make sure the extracted BIOS file matches your motherboard model. Updating the BIOS with an incorrect BIOS file could result in an unbootable system.
4-3 EasyTune 5 Pro

EasyTune™ 5 Pro, an easy-to-use and convenient system overclocking and management tool, lets you do overclock and overvoltage in Windows environment, eliminating the need to enter the BIOS Setup program. EasyTune 5 Pro provides the following functions (Note 1): overclocking/overvoltage, C.I.A./M.I.B. (Note 2), smart fan control, and hardware monitoring and warning. (For instructions on using EasyTune5 Pro, read or download the information on/from the Support\Motherboard\Utility page on our website.)

Incorrectly doing overclock/overvoltage may result in damage to CPU, chipset, or memory and reduce the useful life of these components. Before you do the overclock/overvoltage, make sure that you fully know how to use each function of EasyTune 5 Pro, or system instability or other unexpected results may occur.

(Note 1) Available functions in EasyTune 5 Pro may differ by motherboard model.
(Note 2) C.I.A. and M.I.B. may provide optimizations for CPU and memory, enhancing the performance of these components.
4-4 Dynamic Energy Saver

GIGABYTE Dynamic Energy Saver is a revolutionary technology that delivers unparalleled power savings with the simple click of a button. Featuring an advanced proprietary hardware and software design, GIGABYTE Dynamic Energy Saver is able to provide exceptional power savings of up to 70% and up to 20% improved power efficiency without sacrificing computing performance.

The Dynamic Energy Saver Interface

A. Meter Mode
In Meter Mode, GIGABYTE's Dynamic Energy Saver shows how much power they have saved in a set period of time.

Meter Mode - Button Information Table

- The above data is for reference only. Actual performance may vary depending on motherboard model.
- CPU Power and Power Scores are for reference only. Actual results may vary based on testing method.
B. Total Mode
In Total Mode, users are able to see how much total power savings they have accumulated since activating Dynamic Energy Saver for the first time. Even if the Dynamic Energy Saver functionality is turned off, the total amount of power saved will be recorded until re-activated, when total power savings will resume recording power savings.

(Note 1) Maximize system power saving with Dynamic Frequency Function; system performance may be affected.
(Note 2) Level 1: Normal Power Saving (Default)
Level 2: Advanced Power Saving
Level 3: Extreme Power Saving
(Note 3) Dynamic Energy Saver Meter will automatically reset when the total power saving reaches 99999999 Watts.

4-5 Windows Vista ReadyBoost

Windows ReadyBoost allows you to use flash memory on a Windows Vista certified USB flash drive to boost your computer's performance. You may enable ReadyBoost and allocate part of your USB flash drive’s memory to speed up your computer.

Follow the steps below to enable the ReadyBoost function:

Step 1:
Go to Computer. Right-click on the USB flash drive icon and choose Properties.

Step 2:
In the ReadyBoost tab, select Use this device. Under Space to reserve for system speed, set the amount of memory space to use for ReadyBoost using the slider or spin box. Click Apply and then OK to turn on ReadyBoost.

• The USB flash drive must have at least 256 MB of space.
• The recommended amount of memory to use for ReadyBoost acceleration is one to three times the amount of RAM installed in your computer.
5-1 Configuring SATA Hard Drive(s)

To configure SATA hard drive(s), follow the steps below:
A. Install SATA hard drive(s) in your computer.
B. Configure SATA controller mode in BIOS Setup.
C. Configure a RAID array in RAID BIOS. (Note 1)
D. Make a floppy disk containing the SATA RAID/AHCI driver. (Note 2)
E. Install the SATA RAID/AHCI driver and operating system. (Note 2)

Before you begin
Please prepare:
• At least two SATA hard drives (to ensure optimal performance, it is recommended that you use two hard drives with identical model and capacity). If you do not want to create RAID, you may prepare only one hard drive.
• An empty formatted floppy disk.
• Windows Vista/XP/2000 (Note 3) setup disk.
• Motherboard driver disk.

5-1-1 Configuring Intel® ICH9R SATA Controllers

A. Installing SATA hard drive(s) in your computer
Attach one end of the SATA signal cable to the rear of the SATA hard drive and the other end to available SATA port on the motherboard. If there is more than one SATA controller on your motherboard, refer to "Chapter 1," "Hardware Installation," to identify the SATA controller for the SATA port. (For example, on this motherboard, the SataII0, SataII1, SataII2, SataII3, SataII4 and SataII5 ports are supported by ICH9R Southbridge.) Then connect the power connector from your power supply to the hard drive.

(Note 1) Skip this step if you do not want to create RAID array on the SATA controller.
(Note 2) Required when the SATA controller is set to AHCI or RAID mode.
(Note 3) Due to chipset limitation, Intel ICH9R RAID driver does not support Windows 2000 operating system.
B. Configuring SATA controller mode in BIOS Setup

Make sure to configure the SATA controller mode correctly in system BIOS Setup.

Step 1:
Turn on your computer and press <Delete> to enter BIOS Setup during the POST (Power-On Self-Test). To create RAID, set **SATA RAID/AHCI Mode** under the **Integrated Peripherals** menu to **RAID** (Figure 1)**Disabled** by default). If you do not want to create RAID, set this item to **Disabled** or **AHCI**.

![CMOS Setup Utility-Copyright (C) 1984-2007 Award Software](image)

**Figure 1**

Step 2:
Save changes and exit BIOS Setup.

The BIOS Setup menus described in this section may differ from the exact settings for your motherboard. The actual BIOS Setup menu options you will see shall depend on the motherboard you have and the BIOS version.
C. Configuring a RAID array in RAID BIOS

Enter the RAID BIOS setup utility to configure a RAID array. Skip this step and proceed to the installation of Windows operating system for a non-RAID configuration.

Step 1:
After the POST memory test begins and before the operating system boot begins, look for a message which says"Press <Ctrl-I> to enter Configuration Utility" (Figure 2). Press <Ctrl> + <I> to enter the RAID Configuration Utility.

Step 2:
After you press <Ctrl> + <I>, the MAIN MENU screen will appear (Figure 3).

Create RAID Volume
If you want to create a RAID array, select Create RAID Volume in MAIN MENU and press <Enter>. 
Step 3:
After entering the **CREATE VOLUME MENU** screen, enter a volume name with 1~16 letters (letters cannot be special characters) under the **Name** item and press <Enter>. Then, select a RAID level (Figure 4). There are four RAID levels supported: RAID 0, RAID 1, RAID 10 and RAID 5 (the selections available depend on the number of the hard drives being installed). Press <Enter> to proceed.

![CREATE VOLUME MENU](image1)

Figure 4

Step 4:
Under **Disks** item, select the hard drives to be included in the RAID array. If only two hard drives are installed, they will be automatically assigned to the array. Set the stripe block size (Figure 5) if necessary. The stripe block size can be set from 4 KB to 128 KB. Once you have selected the stripe block size, press <Enter>.

![CREATE VOLUME MENU](image2)

Figure 5
Step 5:
Enter the array capacity and press <Enter>. Finally press <Enter> on the Create Volume item to begin creating the RAID array. When prompted to confirm whether to create this volume, press <Y> to confirm or <N> to cancel (Figure 6).

When completed, you can see detailed information about the RAID array in the DISK/VOLUME INFORMATION section, including the RAID level, stripe block size, array name, and array capacity, etc. (Figure 7)

To exit the ICH9R RAID BIOS utility, press <Esc> or select Exit in MAIN MENU.

Now, you may proceed to create the SATA RAID/AHCI driver diskette and the installation of the SATA RAID/AHCI driver and operating system.
**Delete RAID Volume**

To delete a RAID array, select **Delete RAID Volume** in **MAIN MENU** and press <Enter>. In the **DELETE VOLUME MENU** section, use the up or down arrow key to select the array to be deleted and press <Delete>. When prompted to confirm your selection (Figure 8), press <Y> to confirm or <N> to abort.

![Figure 8](image-url)
5-1-2 Configuring GIGABYTE SATA2 SATA Controller

A. Installing SATA hard drive(s) in your computer
Attach one end of the SATA signal cable to the rear of the SATA hard drive and the other end to available SATA port on the motherboard. If there is more than one SATA controller on your motherboard, refer to "Chapter 1," Hardware Installation," to identify the SATA controller for the SATA port. (For example, on this motherboard, the GSATAIIA and GSATAIIB ports are supported by GIGABYTE SATA2.) Then connect the power connector from your power supply to the hard drive.

B. Configuring SATA controller mode and device boot order in BIOS Setup
Make sure to configure the SATA controller mode correctly in system BIOS Setup and set the device boot order.

Step 1:
Turn on your computer and press <Delete> to enter BIOS Setup during the POST. In BIOS Setup, go to Integrated Peripherals, ensure that Onboard SATA/IDE Device is enabled. Then set Onboard SATA/IDE Ctrl Mode to RAID/IDE (Figure 1). If you do not want to create RAID, set this item to IDE or AHCI, depending on your need.

Step 2:
Save changes and exit BIOS Setup.

Figure 1

The BIOS Setup menus described in this section may differ from the exact settings for your motherboard. The actual BIOS Setup menu options you will see shall depend on the motherboard you have and the BIOS version.
C. Configuring a RAID array in RAID BIOS

Enter the RAID BIOS setup utility to configure a RAID array. Skip this step and proceed to the installation of Windows operating system for a non-RAID configuration.

After the POST memory test begins and before the operating system boot begins, look for a message which says "Press <Ctrl-G> to enter RAID Setup Utility" (Figure 2). Press <Ctrl> + <G> to enter the GIGABYTE SATA2 RAID BIOS utility.

![Figure 2]

GIGABYTE Technology Corp. PCIE-to-SATAII/IDE RAID Controller BIOSv1.06.59

HDD0 : ST3120026AS 120 GB Non-RAID
HDD1 : ST3120026AS 120 GB Non-RAID
ODD0 : DVDROM GO-D1600B

Press <Ctrl-G> to enter RAID Setup Utility ...

Figure 2

In the main screen of the GIGABYTE SATA2 RAID BIOS utility (Figure 3), use the up or down arrow key to highlight through choices in the Main Menu block. Highlight the item that you wish to execute and press <Enter>.

![Figure 3]

In the main screen, you can select a hard drive in the Hard Disk Drive List block and press <Enter> to see detailed information about the selected hard drive.

Note: In the main screen, you can select a hard drive in the Hard Disk Drive List block and press <Enter> to see detailed information about the selected hard drive.
Create a RAID Array:

In the main screen, press <Enter> on the Create RAID Disk Drive item. Then the Create New RAID screen appears (Figure 4).

Steps:
1. **Enter Array Name:** Under the Name item, enter an array name with 1~16 letters (letters cannot be special characters) and press <Enter>.
2. **Select RAID Mode:** Under the Level item, use up or down arrow key to select RAID 0 (Stripe), RAID 1 (Mirror), or JBOD (Figure 5). Then press <Enter> to move onto the next step.
3. **Assign Array Disks:** After a RAID mode is selected, RAID BIOS automatically assigns the two hard drives installed as the RAID drives.

4. **Set Block Size (RAID 0 only):** Under the **Block** item, use the up or down arrow key to select the stripe block size (Figure 6), ranging from 4 KB to 128 KB. Press <Enter>.

5. **Set Array Size:** Under the **Size** item, enter the size of the array and press <Enter>.

6. **Confirm Creation:** After all of the items above are configured, the selection bar automatically jumps to the **Confirm Creation** item. Press <Enter>. When prompted to confirm your selection (Figure 7), press <Y> to confirm or <N> to abort.
When finished, the new RAID array will be displayed in the **RAID Disk Drive List** block (Figure 8).

To check more detailed information about the array, use the <Tab> key while in the **Main Menu** block to move the selection bar to the **RAID Disk Drive List** block. Select the array and press <Enter>. A small window displaying the array information will appear in the center of the screen (Figure 9).
7. **Save and Exit Setup:** After configuring the RAID array, select the **Save And Exit Setup** item in the main screen to save your settings before exiting the RAID BIOS utility, then press <Y> (Figure 10).

![Figure 10](image)

Now, you may proceed to create the SATA RAID/AHCI driver diskette and the installation of the SATA RAID/AHCI driver and operating system.

**Delete the RAID Array:**

To delete the array, select **Delete RAID Disk Drive** in the main menu and press <Enter>. The selection bar will move to the **RAID Disk Drive List** block. Press the space bar on the array to be deleted; a small triangle will appear to mark the selected array. Press <Delete>. When prompted to confirm your selection (Figure 11), press <Y> to confirm or <N> to cancel.

![Figure 11](image)
5-1-3 Making a SATA RAID/AHCI Driver Diskette
(Required for AHCI and RAID Mode)

To successfully install operating system onto SATA hard drive(s) that is/are configured to RAID/AHCI mode, you need to install the SATA controller driver during the OS installation. Without the driver, the hard drive may not be recognized during the Windows setup process. First of all, copy the driver for the SATA controller from the motherboard driver disk to a floppy disk. See the instructions below about how to copy the driver in MS-DOS mode (Note). Prepare a startup disk that has CD-ROM support and a blank formatted floppy disk.

Step 1: Insert the prepared startup disk and motherboard driver disk in your system. Boot from the startup disk. Once at the A:\> prompt, change to your optical drive (example: D:\>). At the D:\> prompt, type the following two commands. Press <Enter> after each command (Figure 1):

cd bootdrv
menu

Step 2: When the controller menu (Figure 2) appears, remove the startup disk and insert the blank formatted disk. Select the controller driver by pressing the corresponding letter from the menu. For example, from the menu in Figure 2:

- For Intel ICH9R SATA controllers, select 7) Intel Matrix Storage Manager 32 bit for Windows 32-bit operating system or 8) Intel Matrix Storage Manager 64 bit for Windows 64-bit.
- For GIGABYTE SATA2 SATA controller, select E) GIGABYTE SATA-RAID Driver 32Bit for Windows 32-bit operating system or F) GIGABYTE SATA-RAID Driver 64Bit for Windows 64-bit.

Your system will then automatically zip and transfer this driver file to the floppy disk. Press <0> to exit when finished.

(Note) For users without a startup disk:

Use an alternative system and insert the motherboard driver disk. From your optical drive folder, double click the MENU.exe file in the BootDrv folder (Figure 3). A command prompt window will open similar to that in Figure 2.
5-1-4 Installing the SATA RAID/AHCI Driver and Operating System

Now that you have prepared the SATA RAID/AHCI driver diskette and configured the required BIOS settings, you are ready to install Windows Vista/XP/2000 onto your hard drive(s). The following is an example of Windows XP and Vista installation.

A. Installing Windows XP

Step 1:
Restart your system to boot from the Windows XP setup disk and press <F6> as soon as you see the message "Press F6 if you need to install a 3rd party SCSI or RAID driver" (Figure 1). After pressing <F6>, there will be a few moments of some files being loaded before you see the next screen.

![Figure 1](image1.png)

Step 2:
When a screen similar to that below appears, insert the floppy disk containing the SATA RAID/AHCI driver and press <S> (Figure 2).

![Figure 2](image2.png)

* To specify additional SCSI adapters, CD-ROM drives, or special disk controllers for use with Windows, including those for which you have a device support disk from a mass storage device manufacturer, press S.

* If you do not have any device support disks from a mass storage device manufacturer, or do not want to specify additional mass storage devices for use with Windows, press ENTER.
Step 3:
When Setup correctly recognizes the Intel ICH9R SATA RAID/AHCI driver in the floppy disk, a controller menu similar to Figure 3 below will appear. Use the arrow keys to select one of the items displayed and press <Enter>. If you set the SATA RAID/AHCI Mode item in BIOS Setup to RAID mode, select Intel(R) ICH8R/ICH9R SATA RAID Controller. (Select ICH9 SAT AHCI Controller (Desktop ICH9R) for AHCI mode.)

If a message appears saying one or some file(s) cannot be found, please check the floppy disk or copy the correct SATA RAID/AHCI driver again from the motherboard driver disk.

When the screen as shown below appears, press <Enter> to continue the driver installation from the floppy disk. The driver installation will be finished in about one minute.
Step 3:
For GIGABYTE SATA2 SATA controller:
When Setup correctly recognizes the GIGABYTE SATA2 SATA RAID/AHCI driver in the floppy disk, a controller menu similar to Figure 5 below will appear. Use the arrow keys to select one of the items displayed and press <Enter>. If you set the Onboard SATA/IDE Ctrl Mode item in BIOS Setup to RAID or AHCI mode, select (Windows XP/2003) RAID/AHCI Driver for GIGABYTE GBB36X Controller.

![Figure 5](image)

If a message appears saying one or some file(s) cannot be found, please check the floppy disk or copy the correct SATA RAID/AHCI driver again from the motherboard driver disk.

When the screen as shown below appears, press <Enter> to continue the driver installation from the floppy disk. The driver installation will be finished in about one minute.

![Figure 6](image)
Step 4:
After the SATA RAID/AHCI driver installation is completed, you can proceed with the Windows XP installation.

![Windows XP Professional Setup](image)

| Enter= Continue | R=Repair | F3=Exit |

Welcome to Setup.
This port of the Setup program prepares Microsoft(R) Windows (R) XP to run on your computer.

To set up Windows XP now, press ENTER.

To repair a Windows XP installation using Recovery Console, press R.

To quit Setup without installing Windows XP, press F3.

Figure 7
B. Installing Windows Vista
(The procedure below assumes that only one RAID array exists in your system.)

Intel ICH9R SATA controllers:
Step 1:
Restart your system to boot from the Windows Vista setup disk and perform standard OS installation steps. When a screen similar to that below appears, select **Load Driver**. (Figure 8).

![Figure 8](image)

Step 2:
Specify the location where the driver is saved, such as your floppy disk (Figure 9).

![Figure 9](image)
Step 3:
When a screen as shown in Figure 10 appears, select **Intel(R) ICH8R/ICH9R SATA RAID Controller** (Note) and press **Next**.

![Figure 10](image)

Step 4:
After the driver is loaded, select the RAID/AHCI drive(s) where you want to install the operating system and then press **Next** to continue the OS installation (Figure 11).

![Figure 11](image)

(Note) The item displayed in Figure 10 will be shown as **Intel(R) ICH9 SATA AHCI Controller** when the SATA controllers are set to AHCI mode.
GIGABYTE SATA2 controllers:

Step 1:
Restart your system to boot from the Windows Vista setup disk and perform standard OS installation steps. When a screen similar to that below appears (RAID/AHCI hard drive(s) will not be detected at this stage), select Load Driver. (Figure 12).

![Figure 12](image)

Step 2:
Specify the location where the driver is saved, such as your floppy disk (Figure 13).

![Figure 13](image)
Step 3:
When a screen as shown in Figure 14 appears, select **GIGABYTE GBB36X Controller** and press **Next**.

![Figure 14](image)

Step 4:
After the driver is loaded, select the RAID/AHCI drive(s) where you want to install the operating system and then press **Next** to continue the OS installation (Figure 15).

![Figure 15](image)
5-2 Configuring Audio Input and Output

5-2-1 Configuring 2/4/5.1/7.1-Channel Audio

The motherboard provides six audio jacks on the back panel which support 2/4/5.1/7.1-channel audio. The picture to the right shows the default audio jack assignments.

The integrated HD (High Definition) audio provides jack retasking capability that allows the user to change the function for each jack through the audio driver.

For example, in a 4-channel audio configuration, if a Rear speaker is plugged into the default Center/Subwoofer speaker out jack, you can retask the Center/Subwoofer speaker out jack to be Rear speaker out.

- To install a microphone, connect your microphone to the Mic in or Line in jack and manually configure the jack for microphone functionality.
- If your front panel audio supports Intel HD Audio standard, you can have both the front and back panel audio connectors active simultaneously.

High Definition Audio (HD Audio)

HD Audio includes multiple high quality digital-to-analog converters (DACs) that support 48KHz sampling rate. HD Audio features multistreaming capabilities that allow multiple audio streams (in and out) to be simultaneously processed. For example, users can listen to MP3 music, have an Internet chat, make a telephone call over the Internet, and etc. all at the same time.

A. Configuring Speakers:
(The following instructions use Windows XP as the example operating system.)

Step 1:
After installing the audio driver, the Audio Manager icon will appear in your system tray. Double-click the icon to access the Audio Control Panel.

Before installing the audio driver, make sure the "Microsoft UAA Bus driver for High Definition Audio" has been installed from the motherboard driver disk and your operating system has been updated with the latest Service Pack for Windows.

(Note) 2/4/5.1/7.1 Channel Audio Configurations:
Refer to the following for multi-channel speaker configurations.
• 2-channel audio: Headphone or Line out.
• 4-channel audio: Front speaker out and Rear speaker out.
• 5.1-channel audio: Front speaker out, Rear speaker out, and Center/Subwoofer speaker out.
• 7.1-channel audio: Front speaker out, Rear speaker out, Center/Subwoofer speaker out, and Side speaker out.
Step 2:
Click the Audio I/O tab. In the speaker list on the left, select 2CH Speaker, 4CH Speaker, 6CH Speaker, or 8CH Speaker according to the type of speaker configuration you wish to set up.

Step 3:
Everytime you connect an audio device to an audio jack, the Connected device box appears. Select the device according to the type of device you connect. Then click OK to complete the configuration.

B. Configuring Sound Effect:
You may configure an audio environment on the Sound Effect tab.

C. Configuring AC‘97 Audio:
If you want to connect an AC‘97 front panel audio module, click the tool icon on the Audio I/O tab On the Global Connector Settings box, select the Disable front panel jack detection check box. Click OK to activate the AC‘97 functionality.

When using an AC‘97 front panel audio module, you can only have audio signals present on either the front or the back panel audio connections, but not both at the same time.
5-2-2 Installing the S/PDIF In Cable (Optional)

The S/PDIF in cable provides S/PDIF in functionality.

S/PDIF In:
The S/PDIF in jacks allow you to input digital audio signals to the computer for audio processing.

A. Installing the S/PDIF In Cable:

Step 1:
First, attach the connector at the end of the cable to the SPDIF_IN header on your motherboard.

Step 2:
Secure the metal bracket to the chassis back panel with a screw.
S/PDIF Out:
The S/PDIF out jacks can transmit audio signals to an external decoder for decoding to get the best audio quality.

B. Connecting a S/PDIF out Cable

Connect a S/PDIF coaxial cable or a S/PDIF optical cable (either one) to an external decoder for transmitting the S/PDIF digital audio signals.

S/PDIF Coaxial Cable

S/PDIF Optical Cable

C. Configuring S/PDIF out:
Click the tool icon in the DIGITAL section. In the S/PDIF In/Out Settings dialog box, select an output sampling rate and select (or disable) the output source. Click OK to complete the configuration.
5-2-3  Enabling the DTS (Digital Theater Systems) Function

Before DTS is enabled, you would get only 2-channel output signals (from the front speakers) when playing 2-channel music. You must play 4-, 5.1-, or 7.1-channel music sources to produce 4-, 5.1-, or 7.1-channel audio effects.

With DTS enabled, the system will transform two-channel stereo source material into multi-channel audio output, creating a virtual surround sound environment.(Note)

After installing the audio driver, at the center bottom of the Audio Control Panel, you should find the DTS control button as shown below:

1. "dts NEO:PC" : This button provides you more controls over "dts NEO:PC".
   - Music Mode ; Cinema Mode

2. "dts NEO:PC" :
   Press this button to enable or disable the dts NEO:PC function.
   Enabling dts NEO:PC allows the system to transform ordinary 2-channel stereo content into 4-, 5.1-, or 7.1-channel surround sound, depending on your speaker configurations.

3. "dts INTERACTIVE" :
   If your surround sound system is connected via an external decoder, click the Audio I/O tab in the Audio Control Panel. Either click DTS Interactive in the upper left list or click the dts INTERACTIVE button at the center bottom of the Audio Control Panel. And click the dts NEO:PC button. The system will then simulate 5.1 channel surround sound playback from two-channel content.

(Note)  When DTS Interactive is enabled, only digital audio output (S/PDIF) is working, and you will not hear sound from analog speaker or headphone.
4. Digital PCM Output Setup:
In the Audio Control Panel, click the Audio I/O tab. In the upper left list, click Digital PCM Output. Enable this function to allow digital audio sources that are not digitally processed by DTS encoding to be output from the S/PDIF OUT.

5-2-4 Configuring Microphone Recording

Step 1:
After installing the audio driver, the Audio Manager icon will appear in your system tray. Double-click the icon to access the Audio Control Panel.

Step 2:
Connect your microphone to the Mic in jack (pink) on the back panel or the Line in jack on the front panel. Then configure the jack for microphone functionality.
Note: The microphone functions on the front panel and back panel cannot be used at the same time.

Step 3:
Locate the Volume icon in your system tray and click it to open the volume control panel.
Step 4:
To hear the sound being recorded during the recording process when using the microphone function on the front panel, do not select the Mute check box under Front Pink In or Front Green In in Master Volume. It is recommended that you set the volume at a middle level.

To hear the sound being recorded during the recording process when using the microphone function on the back panel, do not select the Mute check box under Rear Pink In in Master Volume. It is recommended that you set the volume at its middle level.

(Note)
If you cannot find the volume control options you need in Master Volume, go to the Options menu and then choose Properties. Select the volume control options you wish to show and click OK to complete.

Step 5:
Next, while in Master Volume, go to Options and click Properties. In the Mixer device list, select Realtek HD Audio Input. Then set the recording sound level properly. Do NOT mute the recording sound, or you will not hear any sound when playing back the recording you just made.
Step 6:
To raise the recording and playing sound for the microphone, go to Options in Master Volume and select Advanced Controls. Click the Advanced button under a volume control option (e.g. Front Green In, Front Pink In). In the Other Controls field, select the 1 Microphone Boost check box.

Step 7:
After completion, click Start, point to All Programs, point to Accessories, point to Entertainment, and then click Sound Recorder to begin the sound recording.

5-2-5 Using the Sound Recorder

Recording the Sound:
1. Make sure you have connected the audio input device (e.g. microphone) to the computer.
3. To record a sound file, click the Recording button \( \text{rec} \).
4. To stop the recording, click the Stop button \( \text{stop} \). Be sure to save the recording upon completion.

Playing the Sound:
1. On the File menu, choose Open.
2. In the Open dialog box, select the sound (.wav) file you wish to play.
3. To play a sound file, click the Play button \( \text{play} \).
4. To stop playing, click the Stop button \( \text{stop} \).
5. You may use the Fast Forward button \( \text{fast forward} \) to move to the beginning of a file or the Fast Backward button \( \text{fast backward} \) to the end.
5-3  Teaming

Dual LAN with Teaming functionality enabled on this motherboard allows two single connections to act as one single connection for twice the transmission bandwidth, making data transmission more effective and improving the quality of transmission of distant image(s). Fault tolerance on the dual LAN network prevents network downtime by transferring the workload from a failed port to a working port.

The speed of transmission is subject to the actual network environment or status even with Teaming enabled.

A. Enabling Teaming Functionality in Windows XP:

Step 1:
Insert the motherboard driver disk and select Software Applications. Click Install under Realtek Ethernet Teaming Utility for installation. Restart your system when completed.

Step 2:
The Realtek Ethernet Diagnostic Utility icon appears in the system tray after the system restarts. Double-click the icon to access the utility.

Step 3:
Choose Teaming and click the Create Team button.

Step 4:
Give a name for the Team, e.g. Teaming, and set up the Teaming mode based on your hub's specifications. Select the check boxes for the two available adapters and click OK.

Removing the Existing Teaming:

Step 5:
After you complete the setup, you will see the third virtual network interface. Go to Local Area Connection Status and you will see the connection speed is 2.0 Gbps.

If you want to remove the existing Teaming, click the item you created, and then click the Remove button.
B. Enabling Teaming Functionality in Windows Vista:

Step 1:
Insert the motherboard driver disk and select Software Applications. Click Install under Realtek Ethernet Teaming Utility for installation. Restart your system when completed.

Step 2:
Click the Start icon, Point to All Programs, Realtek Teaming and VLAN, Realtek Teaming and VLAN Utility to access the utility.

Step 3:
Select the two adapters and set up the Teaming mode based on your hub’s specifications. Then click the Teaming button. (Two dialog boxes will appear during the setup process, click OK to continue). When the Create Virtual Adapter For Teaming Complete dialog box appears, click OK to complete.

Step 4:
After the Teaming is created, you will see only one connection in Network and Sharing Center.

Removing the Existing Teaming:

Step 5:
Click View status in Network and Sharing Center and you will see the connection speed is 2.0 Gbps.

If you want to remove the existing Teaming, access the Realtek Vlan & Teaming Utility and click the Remove button.
5-4 Troubleshooting

5-4-1 Frequently Asked Questions
To read more FAQs for your motherboard, please go to the Support\Motherboard\FAQ page on GIGABYTE’s website.

Q: In the BIOS Setup program, why are some BIOS options missing?
A: Some advanced options are hidden in the BIOS Setup program. Press <Delete> to enter BIOS Setup during the POST. In the Main Menu, press <Ctrl>+<F1> to show the advanced options.

Q: Why is the light of my keyboard/optical mouse still on after the computer shuts down?
A: Some motherboard provides a small amount of standby power after the computer shuts down and that’s why the light is still on.

Q: How do I clear the CMOS values?
A: If your motherboard has a clearing CMOS jumper, refer to the instructions on the CLR_CMOs jumper in Chapter 1 to short the jumper to clear the CMOS values. If your board doesn’t have this jumper, refer to the instructions on the motherboard battery in Chapter 1. You can temporarily remove the battery from the battery holder to stop supplying power to the CMOS, which will clear the CMOS values after about one minute. Refer to the steps below:
Steps:
1. Turn off your computer and unplug the power cord.
2. Gently remove the battery from the battery holder and wait for one minute.
   (Or use a metal object like a screwdriver to touch the positive and negative terminals of the battery holder, making them short for 5 seconds.)
3. Replace the battery.
4. Plug in the power cord and restart your computer.
5. Press <Delete> to enter BIOS Setup. Select “Load Fail-Safe Defaults” (or “Load Optimized Defaults”) to load BIOS default settings.
6. Saves changes and exit BIOS Setup (select “Save & Exit Setup”) to restart your computer.

Q: Why do I still get a weak sound even though I have turned my speaker to the maximum volume?
A: Make sure your speaker is equipped with an internal amplifier. If not, try a speaker with power/amplifier.

Q: What do the beeps emitted during the POST mean?
A: The following Award BIOS beep code descriptions may help you identify possible computer problems. (For reference only.)
1 short: System boots successfully
2 short: CMOS setting error
1 long, 1 short: Memory or motherboard error
1 long, 2 short: Monitor or graphics card error
1 long, 3 short: Keyboard error
1 long, 9 short: BIOS ROM error
Continuous long beeps: Graphics card not inserted properly
Continuous short beeps: Power error
5-4-2 Troubleshooting Procedure

If you encounter any troubles during system startup, follow the troubleshooting procedure below to solve the problem.

START

1. Turn off the power. Remove all peripherals, connecting cables, and power cord etc.

2. Make sure the motherboard does not short-circuit with the chassis or other metal objects.
   - Yes: Isolate the short circuit.
   - No: The problem is verified and solved.

3. Check if the CPU cooler is attached to the CPU securely. Is the power connector of the CPU cooler connected to the CPU_FAN header properly?
   - Yes: Secure the CPU cooler on the CPU. Connect the CPU cooler power cable to the motherboard.
   - No: Correctly insert the memory into the memory socket.

4. Check if the memory is installed properly on the memory slot.
   - Yes: The problem is verified and solved.
   - No: The problem is verified and solved.

5. Insert the graphics card. Connect the ATX main power cable and the 12V power cable. Turn on the power to start the computer.

6. Press <Delete> to enter BIOS Setup. Select "Load Fail-Safe Defaults" (or "Load Optimized Defaults"). Select "Save & Exit Setup" to save changes and exit BIOS Setup.

A

(Continued...)

When the computer is turned on, is the CPU cooler running?

Yes

Check if there is display on your monitor.

Yes

Turn off the computer. Plugg in the keyboard and mouse and restart the computer.

Yes

Press <Delete> to enter BIOS Setup. Select "Load Fail-Safe Defaults" (or "Load Optimized Defaults"). Select "Save & Exit Setup" to save changes and exit BIOS Setup.

Yes

Reinstall the operating system. Reinstall other devices one by one (install one device at one time and then boot the system to see if the device works successfully).

END

No

The power supply, CPU or CPU socket might fail.

No

The problem is verified and solved.

No

The graphics card, expansion slot, or monitor might fail.

No

The problem is verified and solved.

No

The keyboard or mouse might fail.

No

The IDE/SATA device, connector, or cable might fail.

No

The problem is verified and solved.

No

The problem is verified and solved.

No

The problem is verified and solved.

No

The problem is verified and solved.

No

The problem is verified and solved.

No

The problem is verified and solved.
Regulatory Statements

Regulatory Notices
This document must not be copied without our written permission, and the contents there of must not be imparted to a third party nor be used for any unauthorized purpose. Contravention will be prosecuted. We believe that the information contained herein was accurate in all respects at the time of printing. GIGABYTE cannot, however, assume any responsibility for errors or omissions in this text. Also note that the information in this document is subject to change without notice and should not be construed as a commitment by GIGABYTE.

Our Commitment to Preserving the Environment
In addition to high-efficiency performance, all GIGABYTE motherboards fulfill European Union regulations for RoHS (Restriction of Certain Hazardous Substances in Electrical and Electronic Equipment) and WEEE (Waste Electrical and Electronic Equipment) environmental directives, as well as most major worldwide safety requirements. To prevent releases of harmful substances into the environment and to maximize the use of our natural resources, GIGABYTE provides the following information on how you can responsibly recycle or reuse most of the materials in your "end of life" product.

Restriction of Hazardous Substances (RoHS) Directive Statement
GIGABYTE products have not intended to add and safe from hazardous substances (Cd, Pb, Hg, Cr+6, PBDE and PBB). The parts and components have been carefully selected to meet RoHS requirement. Moreover, we at GIGABYTE are continuing our efforts to develop products that do not use internationally banned toxic chemicals.

Waste Electrical & Electronic Equipment (WEEE) Directive Statement
GIGABYTE will fulfill the national laws as interpreted from the 2002/96/EC WEEE (Waste Electrical and Electronic Equipment) directive. The WEEE Directive specifies the treatment, collection, recycling and disposal of electric and electronic devices and their components. Under the Directive, used equipment must be marked, collected separately, and disposed of properly.

WEEE Symbol Statement
The symbol shown below is on the product or on its packaging, which indicates that this product must not be disposed of with other waste. Instead, the device should be taken to the waste collection centers for activation of the treatment, collection, recycling and disposal procedure. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local government office, your household waste disposal service or where you purchased the product for details of environmentally safe recycling.

- When your electrical or electronic equipment is no longer useful to you, "take it back" to your local or regional waste collection administration for recycling.
- If you need further assistance in recycling, reusing in your "end of life" product, you may contact us at the Customer Care number listed in your product's user's manual and we will be glad to help you with your effort.
Finally, we suggest that you practice other environmentally friendly actions by understanding and using the energy-saving features of this product (where applicable), recycling the inner and outer packaging (including shipping containers) this product was delivered in, and by disposing of or recycling used batteries properly. With your help, we can reduce the amount of natural resources needed to produce electrical and electronic equipment, minimize the use of landfills for the disposal of "end of life" products, and generally improve our quality of life by ensuring that potentially hazardous substances are not released into the environment and are disposed of properly.

China Restriction of Hazardous Substances Table

The following table is supplied in compliance with China’s Restriction of Hazardous Substances (China RoHS) requirements:

<table>
<thead>
<tr>
<th>部件名称 (Parts)</th>
